Glossary

How to use this

This is the reference behind the script. The playbook tells you what to say; this tells you what is true, so that when a contractor asks a question you did not expect, you can answer it without guessing.

Every feature listed here is taken from the product's own feature matrix, which names the files that must exist for each one. If a feature is in this document, it is in the product. If something is not here, do not promise it.

Every feature here is described as it works today. Where something is newer than the rest, the deep dive says so. If a contractor asks for something you cannot find in this document, say you will check rather than guessing — a contractor who buys on a promise you could not keep cancels in month two and tells people why.

One rule about who you are handed: Quebec leads go only to reps who have set French under “Languages I can sell in” on the Pay tab. If a Quebec contractor is on your screen, that is why — take the call in French.

The first half of this document is the product — what you are selling. The second half, “Your console”, is the room you sell it from: the dialler, the batch, texts, the team chat and your pay. Read that half on day one; it is what the screen in front of you does.

The one thing to lead with

Every feature in this document is in every plan. All of it. The plans differ by how many people can use it and nothing else.

That is the argument. A contractor comparing us to Jobber or Housecall Pro is used to a grid where the thing they actually need sits two tiers up. Here there is no tier to climb: the cheapest plan is the whole product for one person, and paying more only adds seats.

Card fees, when they ask: 3% + 30¢ on a card payment online — pretty much Housecall Pro's 2.99%, and a tenth of a point above Jobber's 2.9% + 30¢, so do not claim we are cheaper on cards. Business and Amex cards are the same 3%, not a 3.49% surcharge rate. Where we win is bank debit in Canada: 1% + 40¢ capped at \$5 per payment — a \$5,000 invoice paid by pre-authorized debit costs the contractor \$5, where Jobber's bank payments are a flat 1% with no cap. Every fee comes off the payment before it reaches their bank; nothing is billed separately and there is no monthly fee for taking payments.

The plans, and what actually changes

Four plans. The only differences are seats, crew logins and price.

PLAN	PER MONTH	FULL SEATS	CREW LOGINS
Solo	\$99	1	5
Crew	\$169	3	8
Shop	\$269	6	11
Scale	\$369	10	15

A full seat is somebody who creates and changes quotes, jobs and invoices. A crew login is somebody who clocks in, reads their schedule and adds photos — they cost nothing and do not count as a seat.

The parts you will be asked about

Ordered the way a contractor's day runs, not the way the software is built. Each one names the feature keys behind it so you can look it up in the reference table.

Quoting, and the sixty-second version

A quote is the product. Everything else exists because a contractor who quotes faster wins more work, and most of them are quoting at nine at night on a laptop after a full day on site.

There are three ways a price gets made. The estimator builds one from the price book on the tablet in the driveway. The homeowner builds one themselves from the instant estimate on the contractor's website. Or the AI receptionist takes the call and drafts one from what was said.

The sixty-second claim is the second of those, and it is worth being precise about what does the work: the trade's takeoff form does the arithmetic, the price book supplies the rates, and for roofing the roof is measured from the sky rather than typed in. The contractor is picking options, not calculating.

Roofing is the one to demonstrate. Type the address, and the surface area, the pitch and the linear details — eaves, rakes, ridge, hips, valleys — come back from satellite measurement. Nobody climbs anything to produce the first number.

[Quotes](#)

[Send a quote by email](#)
[Instant online estimate](#)
[Clients can price their own job](#)
[Quote drafted from the call](#)
[Measure from the sky](#)
[Back to contents](#)

Getting paid to turn up

Contractors who charge for an estimate usually do it because they were burned by tyre-kickers. They will ask whether the software can take that money before the visit, and it can.

The booking page takes the appointment and the deposit in the same step, so the slot is only held once the card has gone through. For a company with a call-out or assessment fee, that fee is the deposit.

Worth saying on the call: this is the same booking page a homeowner uses to book any visit, so a contractor who does not charge simply leaves the deposit off. It is one screen with the money switched on or off, not a separate product.

[Online booking page](#)[Take a deposit to hold the slot](#)[Back to contents](#)

Cost, labour and the margin the contractor actually keeps

This is the part that separates us from a quoting app, and it is the part most contractors have never had. A quote screen shows the price. This shows what the job costs to do and what is left.

Materials come from recipes, labour from hours at the rate they actually pay, and overhead from what they told us they spend. The margin on screen is theirs, not a percentage somebody guessed.

Break-even is the one that lands emotionally. It answers the question a contractor has never been able to answer: below what price does this job lose me money. A rep who can show that number is not selling software any more.

Job costing then closes the loop after the work — quoted against actual — so next year's price book is built on what happened rather than what was hoped.

[Job costing](#)[Your break-even price](#)[Your price book](#)[Material costs and recipes](#)[How your prices compare](#)[Expenses and overhead](#)[Back to contents](#)

The AI review, and the photo read

Before a quote goes out, the AI reads it and says what is missing, what is priced oddly against the contractor's own history, and which add-ons this kind of job usually needs.

Two things to be careful about here, because they are what a sceptical contractor will push on. It compares against THEIR history, never another company's — their numbers never leave their account. And it suggests; it never edits the quote or sends anything.

There is a deeper paid photo read as well, over the photos attached to a quote. It costs AI credit per run, which is why it is a button rather than something that happens automatically to every photo.

[AI quote review](#)[Suggested add-ons](#)[Ask FieldQuo AI](#)[Back to contents](#)

Approval, signature, and the invoice that makes itself

The homeowner opens the quote on their phone, approves it and signs it there. No printing, no scanning, no meeting to collect a signature.

The invoice then mirrors the quote rather than being rebuilt: same lines, same layout, same branding. That mirroring is deliberate and it is worth naming, because the common failure in this category is an invoice that quietly disagrees with the quote the client signed.

A changed invoice keeps its history, so a contractor can show what changed and when. On a disputed job that record is the whole argument.

[Client approves and signs online](#)[Invoices](#)[Send an invoice](#)[Changed invoices, tracked](#)[Client portal](#)[Back to contents](#)

Getting the money

Card payment runs through Stripe into the contractor's OWN payout account. FieldQuo never holds their money — that is worth saying early, because contractors have been burned by platforms that sit in the middle.

Cash, cheque and e-transfer are recorded against the invoice by hand, so the paid figure matches reality whatever the homeowner did.

Sales tax is worked out from the job's address rather than the company's, which matters to anyone working across a boundary.

Financing is the one to phrase carefully — read its limits in the last section before you offer it on a call.

[Get paid by card](#)[Your own payout account](#)[Let clients pay monthly](#)[Sales tax that matches the address](#)[Maintenance plans](#)[Back to contents](#)

From invoice to crew: scheduling, dispatch and the day itself

An approved quote becomes a job, the job gets scheduled and dispatched, and the crew see where to be and what to do.

Crew clock in and out, and those hours are what timesheets, job costing and pay are built from — one set of hours, not three.

The crew inbox is texting for people who do not have a login and will not download an app. A crew member texts a number and it lands in the office, filed against the right person. Contractors with subcontractors or seasonal crews find this immediately obvious.

Before and after photos attach to the job, which is where a homeowner dispute usually ends.

[Jobs](#)[Scheduling and dispatch](#)[Crew shifts](#)[Clock in and out](#)[Timesheets you approve](#)[Before and after photos](#)[Crew inbox](#)[Repeat jobs](#)[Back to contents](#)

The phone: the AI receptionist

A contractor on a roof does not answer the phone, and a missed call is a job that goes to whoever picked up.

The receptionist answers, takes the details and books the visit. It can also ring back to confirm an appointment.

The strongest demonstration is the call turning into a drafted quote — the enquiry arrives already priced enough for the contractor to look at, rather than as a voicemail to return.

Two facts that come up: the contractor can keep the number on their van and forward missed calls to it, or take a new number. And it is billed by the minute from a credit balance, so a quiet month costs almost nothing.

[AI receptionist](#)[Confirmation calls](#)[Quote drafted from the call](#)[Back to contents](#)

Getting found: the website, funnels and campaigns

Most contractors either have no website or one they cannot edit. FieldQuo builds one from what they already told us — their trades, their services, their photos — and it carries their name, not ours.

Lead funnels are the mobile-first version for ads: a few taps, a scored lead in the pipeline, no form to abandon.

Review requests go out after the job, which is when a happy customer will actually write one.

There is a Marketing Designer for ad and social artwork as well: artwork made inside FieldQuo, organised by campaign, in the company's own colours and with their own job photos. A contractor who has been paying somebody to make Facebook posts will care about this one. It is newer than most of this document.

[Your own website](#)[Lead form for your website](#)[Lead funnels](#)[Email campaigns](#)[Review requests](#)[Testimonials on your site](#)[One link for your profiles](#)[Drop-in widgets](#)[Refer another contractor](#)[Back to contents](#)

Working in more than one language

Two separate things, and reps mix them up. The first is the language the CONTRACTOR works in — the app itself. The second is the language the HOMEOWNER reads — the quote, the invoice, the emails.

The second is the one that sells. A contractor whose customers are Spanish-speaking can send a quote in Spanish while working in English themselves.

One rule to state plainly, because it sounds like a limitation and is actually the reassuring part: a document keeps the language it was created in. A signed quote will always say what it said when it was signed. Nothing is re-translated behind the client's back.

Eight languages for the client: English, French, Spanish, Ukrainian, Punjabi, Tagalog, German and Italian. The quote PDF, the invoice, the covering email and the client portal all follow the client's language. The contractor picks it once on the client record and every document after that follows.

[Your client's language](#)[Everything carries your name](#)[Write your own covering email](#)[Your terms on every document](#)[Back to contents](#)

Your console — the room you sell from

Everything above is what a contractor buys. This is what you work in. Each section says what the screen shows and what you do on it, and nothing more — every sentence was checked against the running code and the rendered screens in docs/screens on the day this was built. If the screen in front of you disagrees with a sentence here, the screen is newer; tell the team in #sales.

The console: the list on the left, the lead in the middle, the phone under your hand

Every /sales screen has the same vertical sidebar down the left: Today · Queue · Playbook · My leads · Conversations · Texts · Team · Notes · Calendar · My companies · Demo · Support · Voicemail · Pay. Texts, Team and Voicemail wear a badge when something is waiting. At the foot is “Calls today N / 250” — the dials you have placed since your day started, against the day's ceiling. It collapses to icons if you want the width.

The top bar holds the search box and your status. The status pill says what you are doing and for how long — Available, On a call, Writing it up, Break... — and opens a menu of six: Available · Break · Dinner · Meeting · Training · Off. On a call and Writing it up are not on the menu: pressing Call sets the first and hanging up sets the second, until you save the outcome. Set Off when you leave, because a callback rings only reps who are Available, and a laptop left on Available rings for twenty seconds before the caller moves on.

The Dialer sits on the left of the Queue screen and is laid out like a phone: the number in large type, a 3×4 keypad, and Call under it. The small line above the display is the lead's calling window and whose rule it is — “Window closes 9:00 PM · Oklahoma's rule”, or “FieldQuo's rule” where the state sets none. Under the Call button, where a state caps how often the same business may be rung on the same subject, a second line counts it: “1 of 3 calls in 24 h · Oklahoma”. Outside the window there is no Call button at all, only the reason and the hour it opens; a greyed-out button that does nothing is the one thing this screen refuses to draw.

If the owner gives you another number, type it on the keypad. Call saves it on this lead first, then rings it through the same checks as a stored number — it is never a loose number, and a number on the do-not-contact list is refused with the sentence under the display. During a call the same keys send tones, for a phone menu. Auto-dial is the switch under the button: on, the next lead rings five seconds after you save the outcome, and the card opens on Disposition instead of Script.

On the right is one tall card with eight tabs: Company · Contact · Script · Research · Notes · Disposition · Tasks · Leads. Every number on Company and Contact has Dial beside it. Script is the call as numbered steps, then Key talking points and the Goal — the ask this call exists to make. Research is three layers in the same order every time: facts, then what we think (always with a confidence), then what to recommend. Disposition is the ten outcomes and the next step. Tasks holds callbacks and check-in drafts. Leads is your batch, grouped by calling window. Previous · Next walk the batch; Next in queue jumps to the first lead you can ring now.

The Queue screen: sidebar, status menu, the Dialer on the left, the tabbed card with Script open.

[Back to contents](#)

Your batch: 25 at a time, only leads you can ring this minute

Pick a trade and press Claim the next 25. The server picks — you cannot browse the pool, on purpose — and hands you only leads whose calling window is open at this minute, the one closing soonest first, researched ones ahead of unresearched. At eight in the morning Eastern that is Eastern and Atlantic leads; at nine in the evening it is Pacific ones. A short batch says why: “12 open now — more open at 11:00 AM PT”.

You do not press it again. When fewer than 5 of your leads can still be rung, the console adds the next batch on its own, at most once a minute, and says so quietly: “Added 25 leads open now (PT). 3 closed leads released.” At the same moment, leads you never touched whose window has shut for the rest of your shift go back to the pool. A lead you have called, or booked a callback on, is never taken from you. The day's ceiling is 250 claims, and the sidebar counts toward it.

The zone chips above the list — All · ET · CT · MT · PT, and AT · NT when you hold any — filter it, and the chip you pick says the zone's next fact: “open until 9:00 PM PT”, or “closed — opens 8:00 AM”. Next and Auto-dial follow the filter, so pick PT at the end of your day and the walk stays on the West Coast.

If fewer leads arrive than you asked for and the note says “N Quebec leads not offered — add French to your languages on the Pay tab”, that is the language rule two sections down, not a fault.

The screenshot displays the FieldQuo Sales Portal interface. On the left is a dark blue sidebar with navigation icons and labels: Today, Queue (highlighted in orange), Playbook, My leads, Conversations, Texts (3), Team (1), Notes, Calendar, My companies, Demo, Support, Voicemail (2), and Pay. The main area has a top bar with a search box, status 'Available · 12m 00s', and user 'Daniel Roy'. Below the search bar is a queue list with '9' items, '1 of 9' selected, and 'Next' button. The 'Dialer' section shows a phone number '+14055550100' and a green 'Call Cascade Volt Works' button. A note above the number says 'Window closes 11:00 PM · FieldQuo's rule (Oregon sets none)'. Below the dialer is a script for 'Tahoe Electric Co.' with tabs for Company, Contact, Script (active), Research, Notes, Disposition, Tasks, and Leads. The script includes a title 'Has a form, no booking', a rating of 4.7, and a list of five points: 1. Open with, 2. What we saw, 3. Why them, now, 4. Three questions to ask, and 5. The ask. A bottom status bar shows 'Calls today 24 / 250' and a message: 'Every call moves a contractor closer to getting paid.'

The batch topping itself up: under 5 open, three Pacific leads added, two closed Eastern ones released.

[Back to contents](#)

When a contractor rings you back

A call to your number rings inside the portal, whichever /sales screen you are on. A drawer slides down from under the top bar with the business name, the number and whose lead it is, and two buttons: Pick up and Decline. Pick up puts the live call in the Dialer's own slot, exactly where an outbound call sits, with Mute, Hang up and Transfer. Decline hands the call back so the next rep in the ring plan gets it — it does not send the caller to voicemail. Only when nobody picks up does the caller hold while the system looks again, and reach voicemail after that.

Who rings: first the rep whose number was dialled; then whoever rang that contractor last; then the reps who are Available and have been heard from recently — at most three, twenty seconds each. Paused, Off and stale laptops are skipped, which is why your status matters. A caller from a Quebec area code, or a lead the matcher places in Quebec, rings only reps with French.

Call South County Electric, LLC

What Oklahoma actually says

1 of 3 calls in 24 h · Oklahoma

Auto-dial Off

Company Contact **Script** Research Notes Disposition Tasks Leads ↗

Has a form, no booking
 Chosen because: a quote form and no booking page (rating: 4.7)

Your script for this call
 Generated from what the crawler saw on Sep 9, 2026.

- Open with**
 Hi — is that South County Electric? My name's Daniel and I'm from FieldQuo. I'm calling because I've been through your website and noticed a couple of things that could help you book more jobs — do you have a few minutes so I can show you how?
- What we saw**
 - Your site takes quote requests through a form, but a homeowner can't pick a time — every job waits on a call back.
 - A strong Google rating from dozens of reviews — people already trust you; they just can't book you.
 - Invoices are paid by cheque or at the door, per your FAQ.
- Why them, now**
 Norman is heading into storm season and the shops that let people book a time online are the ones that fill the schedule first.
- Three questions to ask**
 - How do quotes get back to a homeowner today — is that you, after hours?
 - When somebody wants to pay, what happens?
 - How many calls a week do you miss because you're on a ladder?
- The ask**
 I can show you in fifteen minutes how it works for a business like yours. What works better for you, mornings or afternoons?

IF THEY SAY...
"We're busy enough."
 Then the question is which jobs you take — booking online lets you keep the good ones.
"Send me an email."
 Happy to — what should it say you care about most, the booking or the payments? Then

Calls today **24 / 250**
 Every call moves a contractor closer to getting paid.

The incoming-call drawer, down from under the top bar: business, number, whose lead it is, Pick up, Decline.

[Back to contents](#)

Texts: a chat client, and nothing sends itself

Texts is a chat client, not a list with a compose box. The rooms down the left sit in four groups — Needs a reply · Waiting on them · Drafts due · Done — the conversation is in the middle with day dividers and the red unread line, and the contact is in a bar on the right (Details · Channels · History). Every text goes out from FieldQuo's sales number, and the reply lands in the same thread.

The line over the composer is the lead's texting window in THEIR zone — “Open until 9:00 PM CDT”, or “Closed — opens 8:00 AM”. The zone comes from their province, or from the zone you stated after speaking to them; a state that spans two zones (Florida, Texas, BC) is asked about rather than guessed, and it is never taken from the area code. The server judges the window again at the instant you press Send.

STOP means STOP. A conversation where they replied STOP shows a red STOP tag and no composer — nothing can be sent to that number on any channel, and only a superadmin's written request reopens it. Do not work around it from your own phone.

Check-ins are drafts. Day 1 after a company signs up (did setup go through?) and day 7 (is it working on a real job?), and one more near the 60-day mark when it is due, the draft appears in the thread and under Drafts due with a “Tab to load it” hint. You read it, change it, and press Send. Nothing goes out on its own,

ever. Type ! in the composer for the canned wordings — the Check-in and Sales groups, and the signup link.

New message opens a thread with one of your own leads. New text takes a number you type — Canadian and US only; a Caribbean +1 or anything overseas is refused with the reason, and so is a number another rep holds. A number nobody holds becomes a lead with just the number on it, and the first message is the introduction with the signup link, sent by you.

The screenshot displays the 'FIELDQUO SALES' interface. At the top, there are tabs for 'Today', 'Queue', 'Leads', 'Texts' (selected), and 'Team'. The main area is divided into three sections:

- Texts:** A sidebar on the left showing a list of message threads. The first thread is with 'Melton Electric' (6:29 PM). Below it are sections for 'NEEDS A REPLY' (1), 'WAITING ON THEM' (1), 'DRAFTS DUE' (1), and 'DONE' (2).
- Message Thread:** The central area shows a conversation with 'Melton Electric' (+1 405 555 0132). The status is 'Contacted' with a note 'Open until 9:08 PM CDT'. The thread includes a message from 'ME' at 6:28 PM asking about invoices, a date separator for 'Saturday, September 12', a draft message that says 'Hi, it is Rachel from FieldQuo, about Melton Electric...', and a scheduled check-in for 'Thursday at eight works'. At the bottom, there's a 'Send it' button and a note about FieldQuo's address and opt-out policy.
- Contact Details:** A panel on the right for 'Melton Electric' (+1 405 555 0132) showing details like 'BUSINESS', 'CONTACT' (Cody Melton), 'NUMBER', 'EMAIL' (cody@meltonelectric.com), 'TRADE' (electrical), 'CITY / PROVINCE' (Oklahoma City, OK), 'TIME ZONE' (America/Winnipeg), 'LEAD STAGE' (Contacted), 'LEAD SCORE' (78 · Sep 10), and 'ASSIGNED REP' (Rachel K.). An 'Open lead' button is at the bottom.

Texts: the four groups, a thread with a draft check-in in it, the composer with the window line, the contact bar.

[Back to contents](#)

Team: everybody at FieldQuo, from one screen

Team is FieldQuo's own chat — the reps and the people who back them up, in the same rooms, on the same screen a platform admin sees. Three channels everybody is in: #fieldquo, all of FieldQuo and the one nobody can leave; #sales, the reps on the phones and the people behind them; and #support, where you hand a customer's problem to somebody who can fix it. New group makes a private room with the reps and FieldQuo staff you pick; New message opens a direct message with one person; @ in the composer lists the room's members, and a mention can only name somebody who is in the room. A question asked here is read by somebody who can act on it.

[Back to contents](#)

Languages I can sell in — and why Quebec may not reach you

On Pay, under the portal language, is Languages I can sell in. Tick every language you can take a sales call in. Left unanswered, it reads as English only. Quebec leads go only to reps with French — on a single claim, in the batch, when a lead is moved to you, and when a Quebec number rings in — and the queue tells you how many were held back: “N Quebec leads not offered — add French to your languages on the Pay tab to receive them.” New Brunswick has no such rule. If you speak French, tick it before your first shift; a superadmin can also set it on your rep record.

[Back to contents](#)

Voicemail

A contractor who rings your number when nobody can pick up holds for a moment while the system looks for somebody free, and leaves a message after that. Voicemail is where you hear it: each message with the number, when it was left, how many seconds were spoken, a player, and the lead to open. A zero-second message is shown on purpose — it is somebody who rang back, heard the beep and hung up, and is worth a callback. The badge on the tab counts the messages left since your day started.

[Back to contents](#)

Your pay: one customer, three stages, CA\$125

Everything FieldQuo pays a rep is in Canadian dollars. One customer pays CA\$125, in three stages that follow the customer proving out: CA\$20 when the company is Activated — Stripe has verified them and switched charges on, so they can take money; CA\$40 when they are Renewed — they reach their next billing cycle after the free month, whether Stripe collected or a referral credit covered it; CA\$65 when they are Still paying — still subscribed sixty days from the day they signed up, trial included. The plan is a row on your rep record, so a rep hired on different terms keeps them; and if you leave, what your companies go on to earn is still yours.

Pay shows it: Earned all time, Paid to you, Closed not paid yet, This week so far; every company you brought in with the stage it has reached; and the weeks, each with a Paid date once the run has gone. Weeks close Monday to Monday and the run pays the week before. Nothing on the screen can be edited — it is the ledger the payout is paid from. Below it is where FieldQuo sends the money (Interac e-Transfer for a Canadian account, Wise for a rep outside Canada, PayPal, or a bank transfer), then the portal language, then Languages I can sell in.

[Back to contents](#)

Every screen, in the order the menu shows them

The back office is one sidebar. This chapter walks it top to bottom — Home, FieldQuo AI, then the five groups Work, People, Money, Insights and Grow, then Help, Plan and Settings — and then walks the Settings menu the same way. Each entry is the real screen, captured from a signed-in owner's account on the day this guide was built — and, where the screen has a New or Add button, a second figure shows what opens when it is pressed.

Use it two ways. On a demo, it is the route: open the screens in this order and you have shown the whole product in twenty minutes. On a call, it is the answer to “where do I do X?” — find the row, read the sentence, say the words on the screen.

A screen may be missing from a customer's menu. That is not a fault: the sidebar hides rows the signed-in person's access level does not allow (see “Roles and access”), and Cabinet Rates and Material Costs appear only for the trades that price that way.

The main sidebar

Home /app

“Dashboard — Here's what's happening with your business.” It opens with “Waiting on you”: the overdue invoice with a “Chase payment” button, the quotes waiting for a price to be approved, and the next appointment the receptionist booked. Then “Revenue this month” with a sparkline of money received, and four tiles — “Quotes sent this month”, “Conversion rate”, “Money owed”, “Upcoming visits”.

“The detail” below: the monthly bar chart (3m / 6m / 12m), the receivables aging ladder with each owed invoice and its contact, the “Revenue goal” pace bar, “Recent Quotes” and “Upcoming Appointments”. “+ New quote”, “View Clients” and “Schedule Appointment” are the three buttons.

FieldQuo AI /app/copilot

“FieldQuo AI — Ask about your own quotes, invoices, clients and material costs. It looks up real numbers rather than guessing.” An empty conversation with “Try asking” prompts (“Which clients haven't been invoiced yet?”, “What's my average quote value this month?”) and an “Ask about your business...” box.

It answers only about this company's own data and declines general requests — that is the honest pitch, and the reason it can be trusted with a contractor's numbers.

Leads /app/leads

“Leads — Enquiries from your booking page and contact forms.” A four-column board — “New”, “Contacted”, “Won”, “Lost” — that cards drag across. Each card carries a Hot / Warm / Cold score, timeline and budget chips, the category, a photo count, the linked quote number and the assignee.

Filters “All / Hot / Warm / Cold”, a “Hottest” sort, search, and an “Import” button. This is where the website form, the booking link, the receptionist and a referral all land.

Quotes /app/quotes

“Quotes — Manage customer quotes.” Status chips with counts (“All”, “Draft”, “Sent”, “Approved”, “Declined”), a search box, and the list: number, status, client, amount, age. A quote that was sent and never answered is promoted to the top (“Quote sent, no response”, with its valid-until date); an instant estimate carries “Needs review”.

“New Quote” opens the builder. The quote keeps the language it was created in; the client sees it as a page and a PDF with the company's own branding.

+ Add crew member

Add from your team...

Overhead % of price

10

No materials-and-labour recipe covers the trades on this quote — so far only cabinet refinishing and exterior painting have one. Enter the hours and materials you expect below and the margin works from those.

Extra labour hours

0

Extra material cost

0

Hours beyond what the recipe predicts, charged at the rate above.

What you are buying in for this job — a supplier quote, a slab, a rental.

Materials	\$0.00
Labour	\$0.00

Quotes — what opens when you press “New Quote”

Quote reviews /app/estimate-reviews

“Estimate Reviews — Instant estimates from your website land here first. Confirm the price — adjusting it if the property needs it — before the quote can be sent.” Each card names the client and the source (“Homeowner-entered” or “Taken from a phone call”, with a “Listen” button), who it is assigned to, the size and material, the range the homeowner saw and their stated budget, and the line breakdown.

“Approve at CAD ...” with “Approve” and “Open quote”. Nothing an algorithm priced reaches a homeowner without a person pressing this.

Jobs /app/jobs

“Jobs — Scheduled and in-progress work.” Chips “All / Needs a date / Scheduled / In progress / Completed / Cancelled”, an “Archived” toggle, search, and the list with title, status badge, client and visit count.

“New Job” starts one by hand; most jobs are made from an accepted quote. “Past jobs” imports history from a previous system.

Nobody on the crew yet, so labour costs nothing and the margin below is higher than the job's.

+ Add crew member

Add from your team... ▾

Overhead % of price

10

Materials for this job

0

What the job actually consumed — paint, hardware, a slab, a rental.

Materials	\$0.00
Labour	\$0.00
Overhead (10% of price — estimated)	\$0.00
Job cost	\$0.00
Invoice total (pre-tax)	\$0.00

Overhead is a flat percentage of the price because we don't know your capacity yet. Set your monthly costs in Settings → Overhead and your jobs-per-week in Forecast, and this becomes your real cost per job instead of an assumption.

Due Date

yyyy-mm-dd

Invoices — what opens when you press “New Invoice”

Service Plans /app/plans

“Service plans — Recurring work sold as a package, billed on a cadence you choose.” Each plan: name, “Active”, client, cadence (“Once a year”, “Quarterly”), per-visit price, how it is collected (“Invoice sent each visit”), and either the term total with its package discount or “Runs until cancelled”.

“New plan” sells one. A plan is a standing instruction to raise a visit and an invoice — that is why the row sits after Invoices.

Clients — what opens when you press “New Client”

Client equipment /app/equipment

“Warranties running out” — the furnaces, panels and cabinets the company installed whose cover has ended or is about to. It is a call list, and the page says so.

A window picker (“Next 30 days” up to “Next 365 days”) and a tally — out of warranty, ending soon, no date recorded — then one card per piece with a tap-to-call number and an “Email” button, so a renewal visit gets booked from the card.

Client equipment — /app/equipment

Chat /app/chat

“Chat” — the company talking to itself, on the same chat kit as Messages. #general is everyone on the team; each job on the calendar has its own room for the crew booked on it and the office; a direct message is between two people. Rooms group as “Unread”, “Company”, “Jobs”, “Direct messages” and “Finished jobs”.

In a room: the thread with an unread divider, @-mentions that notify the person named, the members list, and the composer. “New message” opens a direct message with anyone on the team.

Permissions

Make administrator

This allows them access to everything within the account — including billing, reports, client list editing, and all user permissions.

Start with a preset permission level, and customize further as needed.

Crew

Worker tier

View their schedule, the jobs they're assigned to, and what to buy for them. Mark work complete and track their time. No prices, quotes, invoices or requests.

Estimator

Worker tier

Writes quotes and manages clients, with pricing. Doesn't manage people, payroll or job costing.

Your team — what opens when you press “Add User”

Subcontractors /app/subcontractors

The companies hired per job — the electrician, the countertop fabricator — with trade, contact, and whether their insurance or clearance is “In date”, “Due soon” or “Expired”; the expiring ones are pulled into a panel at the top so nobody steps on site uncovered.

A “Paid in” year picker totals what each sub was paid, and “Year-end list (CSV)” exports the T5018 list.

Team calendar /app/schedule

“Team Schedule” — everyone on one page: a card per person with their tier, a Mon–Sun strip of availability (“08:00–17:00”, “—” on days off), an “Edit hours” button, and “Next 2 weeks” of what they are booked on, by client.

The owner sees at a glance who is bookable when, and fixes anyone's hours from here.

Time clock /app/clock

“Time clock” — the signed-in person's own punch: the live clock, an “On the clock” pill, time elapsed since they clocked in, which job they are on, and a red “Clock out” button. “Moved to another job?” switches the running entry to a different job.

Below, “Today” totals the day's hours and lists each entry. This is what the crew opens on their phone; the office reviews the result on Timesheets.

Timesheets /app/settings/team/timesheets

“Timesheets — Log, review and approve hours.” One row per punch: today's crew “In progress” with an “In · On site” chip, last week's rows with hours and an “Approve” button, older ones “Approved”. A punch taken far from the job is flagged in amber (“In · 2.1 km away”).

A manager approves hours here before they reach a pay run; “Add entry” records a missed punch by hand.

Time Off /app/time-off

“Time off — Request time off and see what you have left.” Balance cards (Vacation, Sick days, Personal day) with accrued and taken, “Your requests” with “Request time off”, and “Withdraw” on a pending one.

The “Team” tab, for a manager, lists requests “Awaiting approval” with “Approve” and “Decline”, “Who's off next”, and everyone's balances.

Time Off — /app/time-off

Safety /app/safety

“Safety — Injuries and near-misses.” A “Report” button, filters “All / Open / Reviewed / Closed”, and a card per incident with its kind (“Near-miss”, “Property damage”), whether “Work stopped”, where, who reported it and its status.

Each card has a “Follow up” disclosure where a manager sets the status and records what was done. Crew can report; only managers follow up.

Safety — /app/safety

Payroll /app/payroll

“Payroll — FieldQuo works out what each person should be paid from their approved hours and your saved rates, and produces payslips. You pay through your own bank or payroll provider — FieldQuo doesn't move the money.” Say that last sentence on every call: it is the question they ask.

“New pay run” is pre-filled with the last closed period of the company's pay cycle (“Every 2 weeks”); “Calculate” previews gross, deductions and net per person, then “Save as draft run”. “Pay runs” lists each period with its dates, headcount, net total and status — “Approved”, “paid (recorded)”.

Payroll

FieldQuo works out what each person should be paid from their approved hours and your saved rates, and produces payslips. **You pay through your own bank or payroll provider — FieldQuo doesn't move the money.**

MY EARNINGS

THIS PERIOD

Aug 31, 2026 → Sep 13, 2026 - paid Sep 17, 2026

0 approved hours

No hourly rate is set on your record, so this can't be worked out yet. Your approved hours are still counted.

Gross, before deductions. Deductions are added by the office when the run is prepared, so this is what the work is worth — not what lands in your account.

GROSS - 2026

\$0.00

DEDUCTIONS - 2026

\$0.00

NET - 2026

\$0.00

No payslips yet. They appear once a pay run is approved.

New pay run

Only approved time is included. Approve timesheets first, or those hours won't be paid.

Period start

2026-08-17

Period end

2026-08-30

Frequency

Every 2 weeks

Payslip labels

Canada

Calculate

PAY RUNS

No pay runs yet.

Expenses /app/settings/expense-tracking

“Expense Tracking — Where your money goes — by job, overhead, and category — plus your monthly burn rate.” A month stepper over four cards: “Tracked expenses this month”, “Monthly burn rate” (overhead + salaries + debt), “Runway” and “Job-related spend”.

Below: an “AI Summary” card, “Monthly Burn Breakdown” and “Spend by Category” bars, the “6-Month Trend”, and “Recent Expenses” with each receipt tagged “Overhead” or “Job-linked”. “Add Expense”, “Import from bank CSV”, and a “Bookkeeping export” card that downloads a date range as CSVs for the accountant.

Purchasing /app/purchasing

“Purchasing — Who you buy from, what you have on order, and what is on the shelf.” Three tabs: “Orders”, “Stock”, “Suppliers”. Orders lists each purchase order with its supplier, how many lines are in (“0 of 2 lines fully in”, “All in”), status and total; “New order” raises one.

Opening an order records a delivery line by line (“Record delivery”); received stock lands on the Stock tab, which shows what is “On the shelf” and flags anything below its reorder level.

No purchase orders yet.

Purchasing — what opens when you press “New order”

Vehicles /app/fleet

“Vehicles — What's due, what's expiring, and who has the van. What each one cost lives in the asset register.” A “Due or expiring” panel first — insurance, registration, service by date or by mileage with a “Due soon” badge — then a card per van with its plate, model, year and who has it (“with Léo Bouchard”).

A card expands to the four expiries, odometer, VIN, cost and book value, an “Edit” button, the “Maintenance” log and “Documents”.

GETTING PAID

CLIENT-FACING

Overhead

Fixed monthly costs. These, divided by how many jobs you can take on, are the lowest price a job can go out at and still cover the business.

Your minimum price

How many jobs can your crew take on in a normal week?

Jobs per week

not set

Save

Tell us how many jobs a week you can take on and we'll work out your minimum price. Without it there's nothing to divide your overhead by.

Paid hours that never reached a job

The week you guarantee people, against the hours they actually logged against a job. Last 30 days.

This is NOT counted in the cost per job or the minimum price above — those figures leave it out on purpose, because they'd move every quote you write on time entries nobody has checked yet. Add it to them yourself and you'll be counting it twice.

UNABSORBED LABOUR

We can't work this out

UNABSORBED HOURS

0h

Nobody with a guaranteed week has an hourly rate on file, so there's no cost to report — which is not the same as a cost of nothing.

WORKER	SCHEDULED	ON JOBS	UNABSORBED	COST
Jon Smith				
Paid hourly — no guaranteed week				

Fixed costs

Rent, insurance, your phone bill, subscriptions — anything that arrives every month whether or not you win a job. No principal and no interest rate: a loan goes under Debt below.

Nothing here yet. Rent, insurance and the phone bill are usually the first three.

Rent, insurance, phone...

Amount

monthly

+

Salaries

Business overhead only — your own draw, an office wage, anything fixed. These are **not** used to pay anyone: an employee's pay comes from their rate or salary under Manage Team, and appears in Payroll.

Hourly is for overhead paid by the hour — a bookkeeper who does a few hours a week. Do not put a crew member's rate here: their hours are already shared to each job as 1 hour or so. It would be counted twice.

Vehicles — what opens when you press “Add”

“How You Compare — Your average quote pricing vs. the anonymized platform average, by service category.” One row per category with the number of quotes in the region this quarter, “Your average”, “Platform average” and the difference as a percentage. Opt-in, aggregates only — a competitor never sees a company's prices.

This page is also the hub for the rest of the group: “Weekly digests”, “Financial statements”, “Won and lost”, “Estimate accuracy” and “KPI dashboard” are the links under the title.

“KPI dashboard — Sales, profit, execution and cash, in one place.” Period buttons (“This month”, “Last month”, “This quarter”, “Year to date”, “Last year”), then the sections: Sales (win rate, average job value, lead-to-quote conversion, backlog in weeks), Money flow (income, expenses, remaining, by day), Business costs, Profit (gross and net margin, labour cost), Execution (on-time completion, labour utilisation, estimate accuracy), Quality, Cash (receivables by age, overdue) and Customer.

A card with no data says why rather than showing a zero, and a final “Not tracked” section names the two metrics FieldQuo refuses to invent. Requires job costing to be on for the person looking.

KPI dashboard

Sales, profit, execution and cash, in one place — most of these numbers have never had a screen before. A card with no data says why, rather than showing a zero.

[How you compare](#)

This month

Last month

This quarter

Year to date

Last year

Sales

What went out, what came back, and how far ahead you're booked.

WIN RATE

—

1 of 10 so far — 9 more and this becomes reliable.

AVERAGE JOB VALUE

—

1 of 5 so far — 4 more and this becomes reliable.

LEAD → QUOTE CONVERSION

—

No leads yet this period. Once 10 leads have come in, this shows what share turn into quotes.

BACKLOG

—

There's a backlog, but no job with a priced quote was completed this period to measure a weekly pace against. Complete one and this fills in.

Weeks of accepted work still ahead of you, at this period's pace — not months. A residential shop with 2–6 weeks booked is in good shape.

Money flow

What came in, what went out, and what's left for this period — day by day. Income is actual payments received; expenses are what's been logged or imported, never a guess at what's missing.

INCOME

\$41,588.71

Up from nothing last period

EXPENSES

—

No expense has ever been recorded for this company.

[Import a bank statement →](#)

REMAINING

—

No expense has ever been recorded for this company.

INCOME VS. EXPENSES, BY DAY

Income

Expenses

KPIs — /app/analytics/kpis

Marketing /app/marketing

“Marketing” — one card per campaign with its status (“Active”, “Draft”), its kind (“Pamphlet distribution”, “Meta / paid ads”, “Email blast”), its progress (a flyer route shows “26/40 stops” and “9 spoke to”; an ad shows “Budget \$600.00”) and who it is assigned to.

“New Campaign” starts one; “Subscribers” and “Marketing spend” sit beside it. A pamphlet campaign is worked stop by stop from the phone.

Marketing — what opens when you press “New Campaign”

Designer </app/marketing/designer>

“Marketing Designer — Design one ad and export it in every size a social network asks for — Instagram, TikTok, Facebook and YouTube — without redoing the layout by hand.”

Designs are listed under their campaign with “Approved” / “Not approved”, chips for the five formats (Instagram post, Instagram story, TikTok, Facebook feed, YouTube thumbnail) and “2/5 formats ready”. “Make a post from a job” turns a job's before-and-after photos into a post; “New design” opens a blank canvas.

Designer — </app/marketing/designer>

Funnels /app/funnels

“Funnels — Mobile-first, tap-through lead funnels for your ads and link-in-bio. Each one qualifies visitors and drops a scored lead straight into your pipeline.” Each row: name, “Published” or “Draft”, its channel (Web, Instagram, TikTok, YouTube), and how many leads it produced.

“New funnel” opens the AI generator (“Describe your funnel...”, “Generate”) and the channel templates; a row opens the builder and its drop-off report.

Funnels — what opens when you press “New funnel”

Receptionist /app/receptionist

“Receptionist — Calls it has taken for you, and what came of them.” The AI phone agent's log, grouped “Needs you”, “Waiting on you” and “Archived”, each call with the number, time, duration and cost, the summary, and what it produced: “Saved as a lead”, “Visit booked”, a “Listen” button, “Draft a quote from this call”, “Book a callback”.

A line at the top counts the appointments the calls booked. “Recover missed calls” and “Receptionist settings” are the two buttons.

Crew inbox /app/crew-inbox

“Crew inbox — Photos and updates your crew texted in. Filed ones are on their jobs.” The green “Crew texting” panel shows the number the crew text, the credit balance and the rates (2¢ a text, 5¢ a photo). “Needs you — pick the job” holds a photo the system could not file, with “Which job is this for?” and a chip per candidate job; “Filed” lists the rest with the job they landed on.

Messages /app/messages

“Messages — Facebook Page and Instagram business messages, answered here.” Conversations on the left, grouped “Needs a reply” and “Waiting on them”, each with the channel glyph, how long they have waited and a temperature chip (“Warm 35”); channel chips filter All / Facebook / Instagram / WhatsApp.

The open conversation sits in the middle with “Reply” and a private “Note”; the right pane holds the person's details, the status (“Open”, “Waiting on them”, “Snoozed”, “Resolved”), who is “Looking after this”, and “Open lead”. “Monthly review” is the top-right button.

Their name (optional)

Dave

Send invite

Enter their email to send.

We send one message and don't follow up. Up to 20 invites a day.

0 free months earned

Added to your account automatically when a business you referred makes their first payment.

Businesses you've referred

None yet — send an invite above, or share your link.

“Help Centre — Step-by-step guides for everything in FieldQuo — quotes, jobs, invoices, getting paid, booking, your website, your team, and using it on your phone.” A search box, “Replay the setup walkthrough”, and articles grouped by topic (“Getting started”, “Quoting & invoicing”, “Jobs & clients”...).

Articles open in place. Point a contractor here before they call support.

Plan /app/settings/account-billing

“Account & Billing — Your plan, seats, and payment details.” The plan card reads, for example, “Shop · Active · \$269.00/month · 6 seats · 11 crew included free · Next billing date 2026-09-30”, with “Manage billing & payment method”, “See what my clients paid me” and “Cancel plan”.

Under “Plans”, a “Monthly” / “1 year commitment” switch and the four rungs — Solo, Crew, Shop, Scale — each with its seats and crew logins and “Choose plan”; the current one says “Current plan”. Owner and administrators only.

Settings /app/settings/company

“Settings” opens the Settings menu and lands on Company Settings. The menu is eight groups — Account, Business, Team & scheduling, Services & pricing, Documents & templates, Messaging & alerts, Getting paid, Client-facing — closed by default so it reads as an index, with the group you are in opened.

Every row is walked below. A “Search” box at the top of the menu finds a row by typing its name.

The Settings menu

Account & Billing /app/settings/account-billing

The same screen as “Plan” in the main sidebar, reached from the Settings menu: the plan card with status, price, seats, crew logins and next billing date; “Manage billing & payment method”, “See what my clients paid me”, “Cancel plan”; and the four plans with “Choose plan”.

Owner and administrators only — a Manager does not see this row.

Businesses you've referred

None yet — send an invite above, or share your link.

Data Migration /app/settings/migration

“Data Migration” — the paid service where FieldQuo brings a company's old data in. The request card shows what they said they are bringing (QuickBooks, Jobber...), its status (“Quote ready”), FieldQuo's price with its note, and “Accept” / “Decline”; below, “Documents” with “Upload a file” for the exports.

FieldQuo staff create new clients and quotes inside the account, never touch anything that already exists, and every write is logged. The price is paid through FieldQuo billing, not through the contractor's Stripe.

Data Migration — /app/settings/migration

Product Updates /app/settings/product-updates

“Product Updates — What's new in FieldQuo.” A dated changelog, each entry with “Read the full update”. Nothing to configure; it is where a contractor sees what changed since last month.

Product Updates — /app/settings/product-updates

Company Settings /app/settings/company

“Company Settings — Your business details, hours, taxes, and regional preferences.” Cards top to bottom: “Scope of work and terms” (the default process text every new quote starts with, and “Payment terms”), “Payment schedule” (50% “Deposit to book”, 50% “Balance on installation”, “Save schedule”), “Industry & Quote Types”, “Company Details” with the address, “Opening hours”, “Booking availability” and “Tax Settings” (GST, QST, GST + QST, “Create tax rate”).

This is the first screen after signup, and the one the sidebar's Settings row lands on.

Company Settings — /app/settings/company

Branding /app/settings/branding

“Branding — Your logo and brand color appear on every quote, invoice, and email your clients see.” A “Logo” card with “Upload logo”, “Brand Colors” with “Primary” and “Secondary”, and “How your documents will look”, previewing a quote in Light and Dark.

One colour drives every client-facing surface; the contrast is computed, so a yellow or a mid-grey still prints legibly.

Manage Team /app/settings/team

The same “Manage Team” screen as “Your team” in the main sidebar: the seat panel, the roster with each person's access level, “Add User”, and the pending invites.

See “Roles and access” for what each level in the dropdown means.

“Workers” is a tab on this screen, not a Settings row, and only the owner and administrators see it — “Everyone on the books — their pay rate, start date, and payout status.” Each row opens to edit the person's name, the mobile they text site photos from, pay rate per hour, start date, who they report to, field or office, guaranteed hours a week and whether they are active, with “Connect Stripe” for payouts; the page refuses everyone else, Manager and Dispatcher included, because a pay rate is payroll wherever it is typed, and employee-or-contractor is deliberately not editable there.

Permissions

Make administrator

This allows them access to everything within the account — including billing, reports, client list editing, and all user permissions.

Start with a preset permission level, and customize further as needed.

Crew

Worker tier

View their schedule, the jobs they're assigned to, and what to buy for them. Mark work complete and track their time. No prices, quotes, invoices or requests.

Estimator

Worker tier

Writes quotes and manages clients, with pricing. Doesn't manage people, payroll or job costing.

Manage Team — what opens when you press “Add User”

Availability /app/settings/availability

“Your hours” — a “Whose hours” picker, then “Working hours” (the shift, for scheduling and timesheets) and “Bookable hours” (the window the public booking page offers), with a sticky “Save hours”.

The two are deliberately separate, and both are per person: a company's opening hours live on Company Settings, so an estimator's day off never publishes as the shop being closed.

CLIENT-FACING

Your hours

Your shift and your bookable window are separate. They might work 8–4 but only take client bookings 2–4 — set both here.

Working hours

Your shift. Used for scheduling and timesheets. Never shown to clients.

☐ Sunday	Not scheduled
☐ Monday	Not scheduled
☐ Tuesday	Not scheduled
☐ Wednesday	Not scheduled
☐ Thursday	Not scheduled
☐ Friday	Not scheduled
☐ Saturday	Not scheduled

Bookable hours

When clients can book you on your public calendar and website. Usually a narrower window than your shift.

☐ Sunday	Not scheduled
☐ Monday	Not scheduled
☐ Tuesday	Not scheduled
☐ Wednesday	Not scheduled
☐ Thursday	Not scheduled
☐ Friday	Not scheduled
☐ Saturday	Not scheduled

With no bookable hours you won't appear as an option on your company's booking page.

Time Off Policies /app/settings/leave

“Time off policies” — “Policies” with “Add policy”: for example “Vacation — Fixed days per year · 15 days/year · carryover 5 days” and an auto-approved “Sick leave”, each with “Edit”; and a “Year end” card that carries last year's balances into this one.

Owner and administrators only; the balances show on each person's Time off screen.

CLIENT-FACING

Time off policies

What time off your team can take, and how it builds up. Requests and balances live on [Time off](#).

Start from the Canada set

These are common starting points you can edit — not compliance advice. Each one says what it assumes.

Canada

Your country

→

4 policies · figures as of 2024

Vacation shown as 4% accrual (the federal/most-provinces 2-week minimum). Rises to 6% after 5 years in several provinces — adjust per employee's service.

Chosen from the country on your company profile. [Change it in Company settings](#)

Hiring in another country? These are here too.

United States

→

3 policies · figures as of 2024

No federal paid-leave entitlement exists. These are common practice figures — check your state and city sick-leave rules.

United Kingdom

→

3 policies · figures as of 2024

28 days is the 5.6-week statutory minimum and INCLUDES bank holidays. Statutory Sick Pay is a payment scheme, not an allowance — set your own sick policy.

Policies

+ Add policy

No policies yet — seed a template above or add one.

Statutory minimums vary by province, state and length of service, and several rise with years employed. FieldQuo tracks what you configure — it doesn't decide what you owe.

Booking Page /app/settings/booking-page

“Booking Page” — the embed snippet (“Put your booking calendar on your website”, “Copy code”), “How long is a visit?” with the meeting modes (“Visit their place”, “Phone call”), travel buffer, arrival window and default length, “Changes & cancellations” (notice hours, fee refund), then one card per event type — “Kitchen design consultation” 60 min free, “Measurement visit” 45 min with a fee and a promo price.

“New Event Type” adds a kind of appointment a homeowner can self-book.

The screenshot displays the FieldQuo application interface. On the left is a dark blue sidebar with navigation links: Home, WORK (Leads, Quotes, Quote reviews, Jobs, Invoices, Service Plans, Calendar), To-do, PEOPLE (Clients, Client equipment, Your team, Subcontractors, Assign shifts, Team calendar, Time clock, Timesheets, Time Off), and a top 'Create' button. The main content area is titled 'Settings' and includes a search bar and a list of settings categories: ACCOUNT, BUSINESS, Company Settings, Branding, Language, Activity Log, TEAM & SCHEDULING (Manage Team, Availability, Time Off Policies), Booking Page (highlighted in orange), Work Areas, SERVICES & PRICING, DOCUMENTS & TEMPLATES, MESSAGING & ALERTS, GETTING PAID, and CLIENT-FACING. The 'Booking Page' settings panel is open, showing a 'New Event Type' button and a description: 'Event types clients can book directly from your public page.' It contains three main sections: 1. 'Put your booking calendar on your website' with an embed code snippet and a 'Copy code' button. 2. 'How long is a visit?' with a description and a toggle for 'Don't offer times you can't drive to' (which is turned on). 3. 'Extra time between jobs' with a description and a selection of time buffers (None, 10 min, 15 min, 30 min, 45 min, 60 min). The bottom section, 'What do you promise the client?', includes a description and a selection of time promises (Exact time, ± 15 min, ± 30 min, ± 60 min).

FieldQuo Settings

Booking Page + New Event Type

Event types clients can book directly from your public page.

</> Put your booking calendar on your website

Paste this where you want the calendar to appear. It works on Wix, Squarespace, WordPress and hand-written HTML — it is an ordinary HTML element. The small script only resizes the box as the visitor moves through the steps; if your site strips scripts the calendar still works at a fixed height.

```
<iframe id="fieldquo-book" src="https://www.fieldquo.com/embed/easy-roofers-inc-1y13/boo"></iframe><script>window.addEventListener("message", function (e) {if (e.origin !== "https://www.fieldquo.com") return;if (e.data || e.data.type !== "fieldquo:embed-height") return;var f = document.getElementById("fieldquo-book");if (f && f.contentWindow === e.source) f.style.height = e.data.height + "px";});</script>
```

Copy code

How long is a visit?

Used for any consultation FieldQuo sets up for a team member when they add their availability. Existing bookings keep the length they were made with.

How can clients meet you?

Pick everything you offer. If you offer more than one, the client chooses when they book.

Visit their place Phone call Video call

Don't offer times you can't drive to

Clients give an address when they book a visit. Times you couldn't reach on schedule from your previous job are hidden.

Extra time between jobs

Added on top of the drive — parking, unloading, writing up the last job. Starts at none, because guessing on your behalf removes bookable slots you never agreed to give up.

None 10 min 15 min 30 min 45 min 60 min

What do you promise the client?

A window is a promise the road can't break. Your own schedule keeps the exact time either way — this only changes what the client is told.

Exact time ± 15 min ± 30 min ± 60 min

They'll be told 2:00 PM.

Booking Page — /app/settings/booking-page

Work Areas /app/settings/work-areas

“Work Areas” — named zones or projects (Laval, Montréal island, Montréal North Shore), each with a chip per team member; a filled chip means that person is assigned. “New work area name” adds one.

Used to group jobs and tasks by territory; assignment is owner, admin or supervisor only.

Material Costs

These numbers drive the internal Cost & Margin estimate on every quote — what you actually pay for materials and labour, separate from the price you charge the client. Leave anything you’re not sure about at the default.

When to ask about revising your costing

When a completed job's real cost comes in at least this far over what you quoted, the close-out shows the comparison and asks whether to update your rates from what it really cost — or leave them. A job that came in under never asks. 0 asks on any overrun.

Ask to revise costing when a job comes in more than this over its estimate

15% over

Save

Nothing to configure here yet. This screen sets material costs for Cabinet Refinishing and Exterior Painting — turn one of them on in Settings > Services to see it here.

Cabinet Pricing /app/settings/cabinet-rates

“Cabinet pricing” — “How you price a cabinet” (“Per linear foot” or “Material cost-plus”), “Rates per linear foot” (base, wall/upper, tall/pantry, island, drawer surcharge, closet casework, vanity, and whether install is included), then “Material multipliers”.

The kitchen designer prices from these on the server. Shown only for cabinet trades.

“Overhead” — “Your minimum price”: jobs per week, and tiles for monthly fixed costs, jobs per month, cost per job and the minimum price a job must fetch to cover the shop; “Paid hours that never reached a job” (unabsorbed labour per worker); then the registers — Fixed costs, Salaries, Debt, “Assets & depreciation”, and “Bills due” with outstanding, out this month and overdue.

The number a contractor most wants and least often has. Requires job costing.

GETTING PAID

CLIENT-FACING

Overhead

Fixed monthly costs. These, divided by how many jobs you can take on, are the lowest price a job can go out at and still cover the business.

Your minimum price

How many jobs can your crew take on in a normal week?

Jobs per week

not set

Save

Tell us how many jobs a week you can take on and we'll work out your minimum price. Without it there's nothing to divide your overhead by.

Paid hours that never reached a job

The week you guarantee people, against the hours they actually logged against a job. Last 30 days.

This is NOT counted in the cost per job or the minimum price above — those figures leave it out on purpose, because they'd move every quote you write on time entries nobody has checked yet. Add it to them yourself and you'll be counting it twice.

UNABSORBED LABOUR

We can't work this out

UNABSORBED HOURS

0h

Nobody with a guaranteed week has an hourly rate on file, so there's no cost to report — which is not the same as a cost of nothing.

WORKER	SCHEDULED	ON JOBS	UNABSORBED	COST
Jon Smith				
Paid hourly — no guaranteed week				
	—	0h	—	—

Fixed costs

Rent, insurance, your phone bill, subscriptions — anything that arrives every month whether or not you win a job. No principal and no interest rate: a loan goes under Debt below.

Nothing here yet. Rent, insurance and the phone bill are usually the first three.

Rent, insurance, phone...

Amount

monthly

+

Salaries

Business overhead only — your own draw, an office wage, anything fixed. These are **not** used to pay anyone: an employee's pay comes from their rate or salary under Manage Team, and appears in Payroll.

Hourly is for overhead paid by the hour — a bookkeeper who does a few hours a week. Do not put a crew member's

Custom Fields /app/settings/custom-fields

“Custom Fields” — fields defined per record type (quote fields such as door style, finish, hardware finish, with type and required flag).

The page itself says “Coming soon” for showing them on records: the fields are defined here but do not yet appear on a quote. Do not promise that they do.

Quote Email /app/settings/quote-email

“Quote Email — What the email carrying your quotes contains, beyond the quote itself.” A card lists what the email always carries, then “References” — past clients who agreed to take a call, with “Include on every new quote” — and a before-and-after photo section.

The contractor adds names and numbers, uploads pairs of photos and toggles what goes out. The email itself is sent in the quote's language, from the company's own name.

Quote Email — /app/settings/quote-email

Email Templates /app/settings/email-templates

“Email Templates — Customize the emails your clients get.” Grouped Automated / Marketing / Custom, one row per template with an “Active” badge, a button to make it the active one, edit, duplicate and delete; “+ New Template” and “Add default templates” to seed a starter set.

+ New checklist

No checklists yet

Write down the steps your crew repeats on every job once, and stop relying on people remembering them.

Starter checklists for your trades

Written for the services you have switched on. Nothing here is applied to a job on its own — take a copy, cut what doesn't suit you, and it becomes yours to edit.

Roofing — on the job

On the job 5 steps · Roofing

+ Use this

1. Only tear off what you can dry in the same day

2. Replace rotten decking rather than covering it

3. Ice and water shield at the eaves, valleys and penetrations

4. Flash every penetration properly — nearly every leak is flashing

5. Nail to the manufacturer's pattern, or the warranty is void

Roofing Membrane Installation Checklist

On the job 30 steps · Roofing

+ Use this

1. Verify insulation type, thickness, and R-value match approved submittal.

2. Inspect insulation board joints for tight fit and stagger pattern.

3. Verify insulation attachment (mechanical or adhesive) meets wind uplift design.

4. Confirm cover board is installed over insulation where specified.

5. Confirm membrane type, thickness, and color match approved submittal.

6. Inspect membrane for proper relaxation before seaming (single-ply).

and 24 more

Flashing Installation Checklist

On the job 28 steps · Roofing

+ Use this

1. Verify flashing material, gauge, and finish match approved submittal.

2. Confirm flashing material is compatible with adjacent dissimilar metals/materials.

Checklists — what opens when you press “New checklist”

Job photo tags /app/settings/job-photo-tags

“Job photo tags — Your own words for what's happening in a photo.” An ordered list of tags with colour swatches, up / down and “Retire”, an “Add a tag” form with a colour picker, and a block of starter tags.

The crew picks a tag when they text a photo in; the tag is what the office filters by later.

Client messages /app/settings/messages

“Client messages — The texts your clients get.” One editor per SMS type — On my way, Appointment reminder — with token chips, a “Your client sees:” preview, “Save” and “Use default”.

Two kinds of text and no more; do not promise other automated texts from this screen.

Follow-ups /app/settings/follow-ups

“Follow-ups — Automatically send a template a set time after a quote, invoice, or job hits a certain state.” A read-only “How these run” flow (Trigger → Wait → Send email → Stops) drawn from the rules below, where each rule has “Pause” and delete; “+ New Rule” opens the trigger / delay / template form.

A quote unanswered for three days, an invoice seven days overdue: the two rules every shop should have on.

Payments

Connect Stripe so your clients can pay invoices online, directly to your bank account.

Stripe connected Active

Your clients can pay invoices online, and payments go directly to your bank account via Stripe Express.

Stripe is reviewing your account

You've sent them everything they asked for. Payouts to your bank are paused until they finish — usually a day, sometimes two or three. Your clients' payments keep going through in the meantime, and there is nothing for you to do.

[Manage in Stripe](#) [Disconnect](#)

Your Stripe account

Stripe holds this account in your name. These are the details that identify it — in your own Stripe dashboard, and to Stripe if you ever have to ask them why money is being held.

STRIPE ACCOUNT ID

acct_1UEBSdLM1FDznR0L [Copy](#)

This is what Stripe uses to find your account — not your business name and not your email. It starts with acct_.

SIGN-IN EMAIL

Stripe has no email address on this account, so there is nowhere for it to send a sign-in code.

WHAT STRIPE HAS SWITCHED ON

Taking card payments: **On**

Paying out to your bank: **Paused**

Two separate switches. Cards can keep working while payouts are paused — that money is collected and held by Stripe, not lost.

WHAT STRIPE IS STILL WAITING FOR

Nothing from you. Stripe is checking what you already sent; sending it again won't make it faster.

Almost all of this is settled in your own Stripe dashboard — identity documents, bank details, business information. Use Manage in Stripe above.

If the dashboard genuinely can't settle it, Stripe's support is reached from inside your Stripe dashboard once you're signed in. Give them the account ID above — it's what identifies your account to them.

Payments — /app/settings/payments

Meta Ads /app/settings/meta-ads

“Meta Ads” — the connected ad account with “Sync now”, “Disconnect” and a link to the campaigns; “Facebook lead forms” with a switch per form, lead counts and campaigns; “Facebook & Instagram publishing” and the WhatsApp Business card with its number and templates.

One connection feeds three things: ad spend into KPIs, lead forms into Leads, and Page / Instagram / WhatsApp messages into Messages.

Thursday

4 days to approve hours

This period

Aug 31, 2026 → Sep 13, 2026, paid Sep 17, 2026

Last one closed

Aug 17, 2026 → Aug 30, 2026, paid Sep 3, 2026

The deductions and allowances applied when you run payroll. Without these, pay runs show gross pay only.

Start from your region

We'll add the usual statutory deductions so you're not typing tax bands from a PDF. **These are published figures for the year shown — confirm every one with your accountant.** They become your numbers, and FieldQuo won't change them later.

Canada

3 components · 2024 figures

United States

3 components · 2024 figures

United Kingdom

2 components · 2024 figures

+ Add a component

FieldQuo does the arithmetic with the rates you save here. It does not file or remit anything, and it doesn't update rates when they change — review them each tax year with your accountant.

Your website /app/settings/website

“Your website” — the builder: the site address with a “Live” badge, “Open”, “Save” and “Update”; a conversation pane where the contractor types a brief (“Make it bolder”, “lead with reviews”, “shorter page”), Layout and Style pickers, “Fine-tune”, and a Preview / Sections pane with desktop and mobile toggles.

The model writes sentences only; the layout, the services and the testimonials come from the company's own data, so a site is never invented. Free sites carry a small “Site by FieldQuo” footer.

Instant Quotes /app/settings/instant-quotes

“Instant Quotes — Let homeowners get a real starting estimate from your website in seconds.” A live count (“2 live on your instant-estimate link”, “See what homeowners see”), an embed snippet with “Copy code”, then a card per trade with an On switch, a “What the homeowner sees” visibility choice, and the rate fields.

Every instant estimate lands in Estimate Reviews before it can be sent; the public page never shows the rate card.

Let homeowners get a real starting estimate from your website in seconds — roof measured from their address, or an area they trace on a map. Every estimate is a range they can request, and lands in your review queue before anything is binding.

Nothing is live on your instant-estimate link yet — switch a service on below. See what homeowners see

These are ready to go live as soon as you price them

Everything you sell that FieldQuo can price from your own rates is already switched on below. These are the ones where we don't have a rate of yours to use — and we won't quote a homeowner a number you didn't set.

You sell Roofing. Set your price and it goes live. Price Roofing

Roofing

Off

Roof measured automatically from the address (Google satellite).

These are typical starting figures, not your prices. Edit them to your market, then save — nothing is offered to homeowners until you do.

What the homeowner sees

Don't show a price

They submit and we say a quote is on the way.

Show the range after they submit

They fill in the form to unlock their range. You get their details either way — the usual pick.

Show the range straight away

The number appears before they leave any details. Expect people to read it and go.

Budget bands

The four options shown when we ask their budget. Set the three cut-off points; they must go up.

CAD 1000 CAD 5000 CAD 15000

They'll see: Under \$1,000 · \$1,000 – \$5,000 · \$5,000 – \$15,000 · \$15,000+

Bio link — what opens when you press "Add your own link"

Phone receptionist /app/settings/voice

“Phone receptionist — Answers the calls you can't, takes the details, and books visits against your real availability.” The number with “It's answering — turn off”; Credit (balance, minutes, top-ups, “Automatic top-up is on”); “Your number”; the greeting, knowledge, voice and tuning cards; quote callbacks; the crew inbox switch; and “Check it end to end”.

A local number in the contractor's area, answering in the caller's language, booking against the calendar the office sees. The call log is the Receptionist screen in the main sidebar.

Phone receptionist

AI employee

Reviews

Phone receptionist

Answers the calls you can't, takes the details, and books visits against your real availability. It never quotes a price.

Set up a number above first — there's nothing for it to answer on.

1. Credit

35¢ a minute, rounded up, one minute minimum. Your number's monthly rental comes out of this same credit.

Balance: US\$0.00 (about 0 minutes) running low

Add credit

\$10 · 28 min

\$30 · 85 min

\$50 · 142 min

\$100 · 285 min

Crew texting comes out of this same credit: 2¢ per text (each 160 characters) and 5¢ per photo.

Top up automatically

Save a card and we'll buy more credit on our own when the balance runs low, so the receptionist never stops answering mid-week. Off unless you turn it on.

Set up automatic top-up

2. Your number

What the receptionist answers on.

Keep my number, forward missed calls RECOMMENDED

You keep the number that's on your van. Calls you don't pick up ring through to the receptionist instead of voicemail.

This rents a second line for the receptionist to answer on — that's the monthly charge, and it's the number your forwarding code points at. You keep giving out your own. You set the forwarding on your own phone, and you can turn it off the same way in under a minute.

Your current business number

+ Set it up

Add US\$4.00 more credit first — the first month's US\$4.00 rental is charged up front.

Get a new number

A separate line for the receptionist. Good for ads, or a second trade you want to track on its own. It's a new number, so it won't catch calls to the one you already advertise.

AI employee /app/settings/ai-employee

“AI employee — An assistant that answers a customer's message for you.” “What job does it do?” (Sales closer, Receptionist, Tech support, or something else, with what it can and cannot do), “How it writes” (name, tone, opening line, instructions), the material it reads, and the drafts waiting for review.

It drafts; a person sends. The drafts appear in Messages.

AI employeePREVIEW

Reviews

Early preview. This is still being finished, so parts of it may change or behave oddly. Anything you set up here is saved.

AI employee

An assistant that answers a customer's message for you — using your price book and the material you give it.

What job does it do?

The job decides what it's allowed to do, not just how it sounds. A receptionist has no way to look up a price — that's the point of picking one.

Sales closer

Answers price questions and can put a quote together from your own rates. The only role allowed near a number.

Receptionist

Takes the details, books a callback, and passes anything about money to you.

Tech support

Answers from the material you upload and says which document it came from. Fetches you when it isn't in there.

Something else

Your instructions only, with the same limits. It can book a callback and fetch a person, nothing more.

It can: book_callback, hand_off_to_human

It cannot: look_up_service_prices, create_instant_quote

No matter what you write below, it can never invent a price, a date or a policy. If it isn't in your own data or your own material, it hands the conversation to a person.

How it writes

What you call it

Assistant

For you, not for customers. Nothing it writes ever mentions a name or says it's software unless somebody asks outright.

Tone

professional

Opening line (optional)

Your instructions

Facts about your business it should know. Areas you cover, what you don't do, how you like things worded.

Reviews /app/settings/reviews

“Reviews — Ask customers for a review automatically once their job is finished.” “Your review link” with Save, an “Ask automatically” toggle, “When to ask” delay chips, a queue summary, and “Reviews on your website” listing testimonials with show / hide switches and a paste import.

Reviews — /app/settings/reviews

Roles and access — who sees what

A contractor adds a person from Manage Team, and picks one of five access levels: Crew, Estimator, Dispatcher, Manager, or the owner's own level. The first four are presets — a filled-in grid of eleven permission areas and three switches. Crew is fixed: pick it and there is no grid to move, because the free level cannot be reshaped — a grid raised above the Crew ceiling is a paid seat whichever way it was reached. The three paid presets — Estimator, Dispatcher, Manager — can be reshaped afterwards, and moving any dial turns the preset into “Custom”. The tables below are computed from the product's own permission code on the day this guide was built, so they say what the sidebar actually does.

Two things to get right on a call. First, a Crew login is not a seat: a person whose access is at or below the Crew level costs nothing and does not count against the plan's full seats — that is what the “Crew logins” column of the plans table means. Estimator, Dispatcher, Manager and the owner are full seats. Second, hiding a row is not the security: every API the product exposes checks the same grid again on the server, so a person who types a URL they were not shown gets a refusal, not the page.

There is a sixth choice in the dropdown, “Make administrator”, which grants everything the owner has except ownership itself. It exists for a business partner or a bookkeeper who must see billing. Do not suggest it for staff.

Crew Worker tier

The person in the van. They see their own schedule and mark it complete, clock in and out, log their own expenses and time, report a safety incident, and read the notes on the jobs they are assigned to — client name and address, nothing more. No prices anywhere, no quotes, no invoices, no requests. Jobs are view-only and only the ones they are on.

This is the level to put installers and helpers on. It is free, and it is the reason the crew can use the same product as the office without the office worrying about what the crew can see.

The product's own description: “View their schedule, the jobs they're assigned to, and what to buy for them. Mark work complete and track their time. No prices, quotes, invoices or requests.”

Estimator Worker tier

Writes quotes and manages clients, with prices. They can create and edit requests and quotes, see and edit full client records, read all notes, and see (not edit) jobs and invoices. Their own schedule, time and expenses only. No people management, no payroll beyond their own payslips, no job costing.

For a salesperson or a second estimator who should be able to price and send, but not run the shop.

The product's own description: “Writes quotes and manages clients, with pricing. Doesn't manage people, payroll or job costing.”

Dispatcher Manager tier

Runs the schedule. Everyone's schedule is editable, everyone's time is editable, and jobs, quotes, invoices and requests can be created and edited — but not deleted. Full client records, all notes, everyone's safety incidents. Still their own expenses only, still no job costing and no payment collection.

The team lead who books the crew, moves visits and keeps the week honest, without the power to remove anything.

The product's own description: “Edit job, team, and client details. Recommended for team leads.”

Manager Manager tier

Runs the day-to-day, delete included: quotes, jobs, invoices, requests and clients can all be created, edited and deleted; everyone's schedule, time and expenses; job costing on; payment collection on. What a

Manager does not get is payroll (their own payslips only) and the company's billing — the plan, the card, the subscription — which stay with the owner.

This is the office manager or the partner who runs operations. If a contractor asks “can I give someone everything except the money?”, this is the answer.

The product's own description: “Runs the day-to-day — quotes, jobs, clients, scheduling and expenses. Not payroll, and not the company's billing. Recommended for management.”

Owner

Everything, with no grid to consult: the person who signed the company up. Only an owner or administrator can open Account & Billing, Data Migration, Refer & Earn, Activity Log, Notifications, Time Off Policies, Payments and Meta Ads, run payroll, change an existing person's access, or deactivate someone. (A Manager or Dispatcher can invite people, but only at the Worker tier — Crew or Estimator — and only with dials no higher than their own.) The owner is always a full seat.

What each level sees in the menu

A green Yes means the row is in that person's sidebar; a red No means it is hidden and the page behind it refuses them. Computed by running each preset through the sidebar's own filter. Settings rows are gated twice — once by the main sidebar's rule where the row also sits there, once by the Settings menu's own — and both must pass.

The Custom access editor

On Manage Team, every person has a dropdown with the same five choices as the invite screen — Crew, Estimator, Dispatcher, Manager, Administrator — plus “Custom”, which opens the grid. Picking a preset applies its tier and its permissions in one go; picking Crew shows no grid at all, only a line saying what Crew gets, while the paid presets show their grid underneath. Custom shows the eleven areas as

dropdowns and the three switches as checkboxes, starting from whatever the person has now, and a “Worker tier” / “Manager tier” chip on each preset says which tier it produces (Dispatcher and Manager share the Manager tier; Crew and Estimator share the Worker tier).

A person can only hand out what they hold: when a Manager invites someone, the server clamps every dial to the Manager's own level and drops any switch the Manager does not have. Changing an existing person's access, making an administrator, and revoking access are owner-and-administrator only.

Manage Team — the Custom access editor open on an Estimator.

Every feature, by part of the business

All of it, grouped by the part of the business it serves. Each row is the feature's own name and one-line description, the same words the public site uses.

Winning the work

Everything between a stranger hearing your name and a signed price: where the enquiry comes from, what you send back, and how fast.

Lead tracking

Every enquiry in one list, scored hot to cold, with a one-click turn into a quote.

Lead form for your website	A form you can drop on any site; what comes back lands in your leads list, not an inbox.
Quotes	Build a quote from your own rates, group it by room or scope, and add photos.
Good, better, best options	Send one job at three prices and let the client pick the one they want.
Send a quote by email	One button emails the quote from your address, with the PDF attached, in the client's language.
Quote PDF in your colours	A PDF that carries your logo and brand colour — nothing on it says FieldQuo.
Client approves and signs online	The client opens a link, picks any extras, signs, and the job is on — no printing, no phone tag.
AI quote review	Before you send it: what you forgot, how the price sits against the ones you have won, and clearer wording.
Suggested add-ons	Optional extras at the bottom of the quote, priced from your own history, that the client can tick.
Automatic follow-ups	A quote that goes quiet gets chased on your schedule, in your words, without you remembering.
AI receptionist	Answers your phone when you are on a ladder, takes the details, books the visit, and leaves you the recording.
Confirmation calls	The assistant rings ahead to confirm tomorrow's appointments so you do not lose the morning to no-shows.
Quote drafted from the call	What the caller described comes back as a draft quote you open, correct and send.
Online booking page	Clients pick a slot from your real availability, with travel time and arrival windows built in.
Take a deposit to hold the slot	Charge a visit fee at booking and credit it against the invoice when the work goes ahead.
Your own website	A site written from what you already told us, on your own address, that you can edit block by block.
Instant online estimate	A visitor answers a few questions and gets a price range on the spot, from rates you set.
Clients can price their own job	A public form where a homeowner describes the work and uploads photos; it arrives as a started quote.
Kitchen and cabinet designer	Draw the run, pick the finishes, and the cabinet prices and the floor plan go straight into the quote.

Measure from the sky	Type the address and get roof area and pitch, or trace a driveway or patio, without going out there.
Lead funnels	Multi-step landing pages for an ad or a flyer, with numbers on where people drop out.
Email campaigns	Write once, send to your client list from your own address, and see who it reached.
Door-hanger routes	Plan the streets, assign them, and tick off the stops as your crew works the neighbourhood.
Review requests	After the job is done and paid, the client gets one polite ask for a review.
Testimonials on your site	Collect what clients said and show it on your website and in your quotes.
Refer another contractor	Send an invite; when they sign up you both get a free month added to your account.
Drop-in widgets	Paste one line into any website you already have to embed your booking, quote form or reviews.
One link for your profiles	A single branded page for your Instagram or truck decal that points at everything you offer.
Subcontractors	Keep the companies you hire on file, put one on a job at an agreed price, record what you pay them, and track their insurance and year-end tax forms.

Doing the job

Getting the right person to the right address with the right information, and knowing what the job actually cost you.

Jobs	An approved quote becomes a job with the scope, the address and the paperwork already on it.
Scheduling and dispatch	Put visits on the calendar, assign the person going, and see the whole crew's week at once.
Crew shifts	Build next week's rota, publish it, and everyone sees their own shifts.
Repeat jobs	Weekly, monthly or seasonal work that puts itself back on the calendar.
Appointment reminders	The client gets a text before you arrive, so fewer doors are locked when you get there.
Clients reschedule themselves	A link in the confirmation lets the client move the visit without ringing you.
Job costing	Labour, materials and expenses against the price you quoted, so you know what you actually made.
Materials on the job	What went on site, what it cost, and what is still to buy.

Before and after photos	Photos filed against the job, ready to go into the quote, the invoice or your website.
Job checklists	A list of what has to be done on site, ticked off by the person doing it.
Suggested next steps	The job proposes the tasks a job like this usually needs, so nothing gets forgotten.
To-do list	Everything that needs chasing, sorted by what will hurt most if you leave it.
Work areas	Break a big job into rooms or zones and hand each one to a different person.
Clock in and out	Crew clock on against the job they are on, from whatever phone they have.
Timesheets you approve	Hours land tied to real jobs; you approve them before they can turn into pay.
Crew inbox	Your crew text photos and updates to one number and they file themselves against the right job.
Time off and holidays	Requests go to the right manager, balances build up on their own, and the calendar knows.

Getting paid

Invoicing that mirrors your quote, payment the client can make from their phone, and the money landing in your account.

Invoices	An approved quote turns into an invoice that looks like the quote, because it is built from it.
Send an invoice	Emailed from your address with the PDF attached and a pay-now link inside.
Changed invoices, tracked	Amend an issued invoice and the old one is kept, so there is never a question about what was agreed.
Get paid by card	The client pays from their phone and the money goes to your account, not ours.
Your own payout account	Connect your bank once; every client payment settles into it directly.
Let clients pay monthly	Turn on pay-over-time at checkout for the big jobs homeowners put off.
Maintenance plans	Sign a client up to a recurring plan and the card is charged on schedule without you asking.
Client portal	One link where a client sees their quotes, invoices and what they still owe.
Sales tax that matches the address	Set your rates once; the right one lands on the document for where the work is.

Running the business

Your numbers, your people, your prices, and your name on every document the homeowner sees.

Dashboard	What is quoted, won, scheduled and owed, on one screen, as of this morning.
Your break-even price	What a day has to bring in before you make a cent, worked out from your real overhead.
How your prices compare	Where your rates and your win rate sit against other shops in your trade — nobody named, including you.
Monthly write-up	Once a month, your numbers explained in sentences instead of charts.
Revenue goal	Set a target for the year and see how far ahead or behind you are.
Expenses and overhead	Record what you spend, split what belongs to a job from what belongs to the business.
What your advertising is worth	Log what you spend by channel — including an automatic import from Meta Ads — and see a blended cost per lead across everything you do to bring in work.
Payroll	Approved hours become a pay run with payslips you can hand over or export for your accountant.
Pay contractors from the app	Approved hours for someone on your roster marked as a contractor go out as a real transfer to their bank.
Your price book	Your services and rates in one place, importable from a spreadsheet and exportable back out.
Material costs and recipes	What a litre of paint or a sheet of ply costs you, and how much of it a job of this size eats.
Team roles and access	Decide, dial by dial, what each person can see and change — and it holds on the server, not just on screen.
Everything carries your name	Your logo and your colour on every quote, invoice, page and email a homeowner sees.
Email from your own address	Verify your domain once and everything goes out from you, not from a shared address.
Write your own covering email	Change what the quote email says, section by section, and it stays in the language the quote was written in.
Your own quote and invoice layout	Choose which sections appear on the printed document, and which one is the default.
Your terms on every document	Payment terms and contract wording that attach themselves to what you send.
Your client's language	Send a quote in the language your client speaks; a signed document keeps the words it was signed with.

Ask FieldQuo AI	Ask a question about your own business in plain English and get the answer from your own numbers.
Who changed what	A running record of every send, edit and approval, with a name and a time against it.
Client list	Every client, their properties and their history, imported from wherever it lives now.

[Back to contents](#)

Glossary

The words a contractor may not know, and the ones we use differently from our competitors.

Activated · Renewed · Still paying

The three stages of your pay for one customer — CA\$20 when their Stripe account can take money, CA\$40 when they reach their next billing cycle, CA\$65 when they are still subscribed sixty days from the day they signed up.

Add-on

An extra the client can accept on the quote itself, priced by the server rather than the browser. The homeowner ticks it; the total updates. [See Suggested add-ons](#)

Batch

The 25 leads the server hands you in one press of Claim the next 25 — only leads whose calling window is open at that minute. Tops itself up when fewer than 5 can still be rung.

Break-even price

The price below which a job loses the contractor money, worked out from their own overhead and labour rather than a rule of thumb. [See Your break-even price](#)

Calling window

The hours a business may legally be rung, in its own time zone, from its state's or province's rule. The console never shows a Call button outside it.

Check-in draft

A text FieldQuo writes for you and puts in the thread — day 1 and day 7 after a company signs up, and near the 60-day mark. You edit it and press Send. Nothing sends it for you.

Crew login

Somebody who clocks in, reads their schedule and adds photos. Free, and does not use a seat. [See Crew shifts](#)

Crew inbox

Texting with crew who have no login and will not install an app. They text a number; it lands in the office filed against them. [See Crew inbox](#)

Disposition

What happened on the call, picked from ten outcomes, with the next step. Saving it is what ends “Writing it up” and, with Auto-dial on, what rings the next lead.

Instant estimate

A price a homeowner produces themselves on the contractor's website, from the contractor's own rates. Never our rates. [See Instant online estimate](#)

Job costing

Quoted against actual, after the work — so next year's prices are built on what happened. [See Job costing](#)

Lead

A contractor we want as a customer. The ones the queue hands you and the ones you typed in yourself are both leads; the word “prospect” is not used.

Price book

The contractor's own rates for labour, materials and services. Everything priced in FieldQuo comes from here. [See Your price book](#)

Seat

Somebody who creates and changes quotes, jobs and invoices. Seats are the only thing the plans differ by. [See Team roles and access](#)

Status

What you have told the portal you are doing — Available, Break, Dinner, Meeting, Training or Off. Incoming calls ring only reps who are Available; the two states the system sets itself are On a call and Writing it up.

Takeoff

The trade-specific form that turns measurements into a priced quote — squares of roof, linear feet of gutter, doors and drawers. [See Quotes](#)

Vision pass

The paid deep photo read. Distinct from the free review, which also looks at photos but does not charge.

White label

Every document a homeowner sees carries the contractor's name and colours, not ours. This is the default, not an upgrade. [See Everything carries your name](#)

Zone chips

All · ET · CT · MT · PT above your list. Pick one and the list, Next and Auto-dial stay in that time zone.

[Back to contents](#)
