Languages I can sell in — and why Quebec may not reach you

Voicemail

Your pay: one customer, three stages, CA\$125

Every feature, by part of the business

Glossary

How to use this

This is the reference behind the script. The playbook tells you what to say; this tells you what is true, so that when a contractor asks a question you did not expect, you can answer it without guessing.

Every feature listed here is taken from the product's own feature matrix, which names the files that must exist for each one. If a feature is in this document, it is in the product. If something is not here, do not promise it.

Every feature here is described as it works today. Where something is newer than the rest, the deep dive says so. If a contractor asks for something you cannot find in this document, say you will check rather than guessing — a contractor who buys on a promise you could not keep cancels in month two and tells people why.

One rule about who you are handed: Quebec leads go only to reps who have set French under “Languages I can sell in” on the Pay tab. If a Quebec contractor is on your screen, that is why — take the call in French.

The first half of this document is the product — what you are selling. The second half, “Your console”, is the room you sell it from: the dialler, the batch, texts, the team chat and your pay. Read that half on day one; it is what the screen in front of you does.

The one thing to lead with

Every feature in this document is in every plan. All of it. The plans differ by how many people can use it and nothing else.

That is the argument. A contractor comparing us to Jobber or Housecall Pro is used to a grid where the thing they actually need sits two tiers up. Here there is no tier to climb: the cheapest plan is the whole product for one person, and paying more only adds seats.

The plans, and what actually changes

Four plans. The only differences are seats, crew logins and price.

PLAN	PER MONTH	FULL SEATS	CREW LOGINS
Solo	\$99	1	5
Crew	\$169	3	8
Shop	\$269	6	11

PLAN	PER MONTH	FULL SEATS	CREW LOGINS
Scale	\$369	10	15

A full seat is somebody who creates and changes quotes, jobs and invoices. A crew login is somebody who clocks in, reads their schedule and adds photos — they cost nothing and do not count as a seat.

The parts you will be asked about

Ordered the way a contractor's day runs, not the way the software is built. Each one names the feature keys behind it so you can look it up in the reference table.

Quoting, and the sixty-second version

A quote is the product. Everything else exists because a contractor who quotes faster wins more work, and most of them are quoting at nine at night on a laptop after a full day on site.

There are three ways a price gets made. The estimator builds one from the price book on the tablet in the driveway. The homeowner builds one themselves from the instant estimate on the contractor's website. Or the AI receptionist takes the call and drafts one from what was said.

The sixty-second claim is the second of those, and it is worth being precise about what does the work: the trade's takeoff form does the arithmetic, the price book supplies the rates, and for roofing the roof is measured from the sky rather than typed in. The contractor is picking options, not calculating.

Roofing is the one to demonstrate. Type the address, and the surface area, the pitch and the linear details — eaves, rakes, ridge, hips, valleys — come back from satellite measurement. Nobody climbs anything to produce the first number.

Getting paid to turn up

Contractors who charge for an estimate usually do it because they were burned by tyre-kickers. They will ask whether the software can take that money before the visit, and it can.

The booking page takes the appointment and the deposit in the same step, so the slot is only held once the card has gone through. For a company with a call-out or assessment fee, that fee is the deposit.

Worth saying on the call: this is the same booking page a homeowner uses to book any visit, so a contractor who does not charge simply leaves the deposit off. It is one screen with the money switched on or off, not a separate product.

[Online booking page](#)
[Take a deposit to hold the slot](#)

[Back to contents](#)

Cost, labour and the margin the contractor actually keeps

This is the part that separates us from a quoting app, and it is the part most contractors have never had. A quote screen shows the price. This shows what the job costs to do and what is left.

Materials come from recipes, labour from hours at the rate they actually pay, and overhead from what they told us they spend. The margin on screen is theirs, not a percentage somebody guessed.

Break-even is the one that lands emotionally. It answers the question a contractor has never been able to answer: below what price does this job lose me money. A rep who can show that number is not selling software any more.

Job costing then closes the loop after the work — quoted against actual — so next year's price book is built on what happened rather than what was hoped.

The AI review, and the photo read

Before a quote goes out, the AI reads it and says what is missing, what is priced oddly against the contractor's own history, and which add-ons this kind of job usually needs.

Two things to be careful about here, because they are what a sceptical contractor will push on. It compares against THEIR history, never another company's — their numbers never leave their account. And it suggests; it never edits the quote or sends anything.

There is a deeper paid photo read as well, over the photos attached to a quote. It costs AI credit per run, which is why it is a button rather than something that happens automatically to every photo.

[AI quote review](#)

[Suggested add-ons](#)

[Ask FieldQuo AI](#)

[Back to contents](#)

Approval, signature, and the invoice that makes itself

The homeowner opens the quote on their phone, approves it and signs it there. No printing, no scanning, no meeting to collect a signature.

The invoice then mirrors the quote rather than being rebuilt: same lines, same layout, same branding. That mirroring is deliberate and it is worth naming, because the common failure in this category is an invoice that quietly disagrees with the quote the client signed.

A changed invoice keeps its history, so a contractor can show what changed and when. On a disputed job that record is the whole argument.

Getting the money

Card payment runs through Stripe into the contractor's OWN payout account. FieldQuo never holds their money — that is worth saying early, because contractors have been burned by platforms that sit in the middle.

Cash, cheque and e-transfer are recorded against the invoice by hand, so the paid figure matches reality whatever the homeowner did.

Sales tax is worked out from the job's address rather than the company's, which matters to anyone working across a boundary.

Financing is the one to phrase carefully — read its limits in the last section before you offer it on a call.

From invoice to crew: scheduling, dispatch and the day itself

An approved quote becomes a job, the job gets scheduled and dispatched, and the crew see where to be and what to do.

Crew clock in and out, and those hours are what timesheets, job costing and pay are built from — one set of hours, not three.

The crew inbox is texting for people who do not have a login and will not download an app. A crew member texts a number and it lands in the office, filed against the right person. Contractors with subcontractors or seasonal crews find this immediately obvious.

Before and after photos attach to the job, which is where a homeowner dispute usually ends.

The phone: the AI receptionist

A contractor on a roof does not answer the phone, and a missed call is a job that goes to whoever picked up.

The receptionist answers, takes the details and books the visit. It can also ring back to confirm an appointment.

The strongest demonstration is the call turning into a drafted quote — the enquiry arrives already priced enough for the contractor to look at, rather than as a voicemail to return.

Two facts that come up: the contractor can keep the number on their van and forward missed calls to it, or take a new number. And it is billed by the minute from a credit balance, so a quiet month costs almost nothing.

[AI receptionist](#)[Confirmation calls](#)[Quote drafted from the call](#)[Back to contents](#)

Getting found: the website, funnels and campaigns

Most contractors either have no website or one they cannot edit. FieldQuo builds one from what they already told us — their trades, their services, their photos — and it carries their name, not ours.

Lead funnels are the mobile-first version for ads: a few taps, a scored lead in the pipeline, no form to abandon.

Review requests go out after the job, which is when a happy customer will actually write one.

There is a Marketing Designer for ad and social artwork as well: artwork made inside FieldQuo, organised by campaign, in the company's own colours and with their own job photos. A contractor who has been paying somebody to make Facebook posts will care about this one. It is newer than most of this document.

[Your own website](#)[Lead form for your website](#)[Lead funnels](#)[Email campaigns](#)[Review requests](#)[Testimonials on your site](#)[One link for your profiles](#)[Drop-in widgets](#)[Refer another contractor](#)[Back to contents](#)

Working in more than one language

Two separate things, and reps mix them up. The first is the language the CONTRACTOR works in — the app itself. The second is the language the HOMEOWNER reads — the quote, the invoice, the emails.

The second is the one that sells. A contractor whose customers are Spanish-speaking can send a quote in Spanish while working in English themselves.

One rule to state plainly, because it sounds like a limitation and is actually the reassuring part: a document keeps the language it was created in. A signed quote will always say what it said when it was signed. Nothing is re-translated behind the client's back.

Eight languages for the client: English, French, Spanish, Ukrainian, Punjabi, Tagalog, German and Italian. The quote PDF, the invoice, the covering email and the client portal all follow the client's language. The contractor picks it once on the client record and every document after that follows.

[Your client's language](#)[Everything carries your name](#)[Write your own covering email](#)[Your terms on every document](#)[Back to contents](#)

Your console — the room you sell from

Everything above is what a contractor buys. This is what you work in. Each section says what the screen shows and what you do on it, and nothing more — every sentence was checked against the running code and the rendered screens in docs/screens on the day this was built. If the screen in front of you disagrees with a sentence here, the screen is newer; tell the team in #sales.

The console: the list on the left, the lead in the middle, the phone under your hand

Every /sales screen has the same vertical sidebar down the left: Today · Queue · Playbook · My leads · Conversations · Texts · Team · Notes · Calendar · My companies · Demo · Support · Voicemail · Pay. Texts, Team and Voicemail wear a badge when something is waiting. At the foot is “Calls today N / 250” — the dials you have placed since your day started, against the day's ceiling. It collapses to icons if you want the width.

The top bar holds the search box and your status. The status pill says what you are doing and for how long — Available, On a call, Writing it up, Break... — and opens a menu of six: Available · Break · Dinner · Meeting · Training · Off. On a call and Writing it up are not on the menu: pressing Call sets the first and hanging up sets the second, until you save the outcome. Set Off when you leave, because a callback rings only reps who are Available, and a laptop left on Available rings for twenty seconds before the caller moves on.

The Dialer sits on the left of the Queue screen and is laid out like a phone: the number in large type, a 3×4 keypad, and Call under it. The small line above the display is the lead's calling window and whose rule it is — “Window closes 9:00 PM · Oklahoma's rule”, or “FieldQuo's rule” where the state sets none. Under the Call button, where a state caps how often the same business may be rung on the same subject, a second line counts it: “1 of 3 calls in 24 h · Oklahoma”. Outside the window there is no Call button at all, only the reason and the hour it opens; a greyed-out button that does nothing is the one thing this screen refuses to draw.

If the owner gives you another number, type it on the keypad. Call saves it on this lead first, then rings it through the same checks as a stored number — it is never a loose number, and a number on the do-not-contact list is refused with the sentence under the display. During a call the same keys send tones, for a phone menu. Auto-dial is the switch under the button: on, the next lead rings five seconds after you save the outcome, and the card opens on Disposition instead of Script.

On the right is one tall card with eight tabs: Company · Contact · Script · Research · Notes · Disposition · Tasks · Leads. Every number on Company and Contact has Dial beside it. Script is the call as numbered steps, then Key talking points and the Goal — the ask this call exists to make. Research is three layers in the same order every time: facts, then what we think (always with a confidence), then what to recommend. Disposition is the ten outcomes and the next step. Tasks holds callbacks and check-in drafts. Leads is your batch, grouped by calling window. Previous · Next walk the batch; Next in queue jumps to the first lead you can ring now.

The Queue screen: sidebar, status menu, the Dialer on the left, the tabbed card with Script open.

[Back to contents](#)

Your batch: 25 at a time, only leads you can ring this minute

Pick a trade and press Claim the next 25. The server picks — you cannot browse the pool, on purpose — and hands you only leads whose calling window is open at this minute, the one closing soonest first, researched ones ahead of unresearched. At eight in the morning Eastern that is Eastern and Atlantic leads; at nine in the evening it is Pacific ones. A short batch says why: “12 open now — more open at 11:00 AM PT”.

You do not press it again. When fewer than 5 of your leads can still be rung, the console adds the next batch on its own, at most once a minute, and says so quietly: “Added 25 leads open now (PT). 3 closed leads released.” At the same moment, leads you never touched whose window has shut for the rest of your shift go back to the pool. A lead you have called, or booked a callback on, is never taken from you. The day's ceiling is 250 claims, and the sidebar counts toward it.

The zone chips above the list — All · ET · CT · MT · PT, and AT · NT when you hold any — filter it, and the chip you pick says the zone's next fact: “open until 9:00 PM PT”, or “closed — opens 8:00 AM”. Next and Auto-dial follow the filter, so pick PT at the end of your day and the walk stays on the West Coast.

If fewer leads arrive than you asked for and the note says “N Quebec leads not offered — add French to your languages on the Pay tab”, that is the language rule two sections down, not a fault.

The screenshot displays the FieldQuo Sales Portal interface. On the left is a dark blue sidebar with navigation icons and labels: Today, Queue (highlighted in orange), Playbook, My leads, Conversations, Texts (3), Team (1), Notes, Calendar, My companies, Demo, Support, Voicemail (2), and Pay. The main area has a top bar with a search box, status 'Available · 12m 00s', and user 'Daniel Roy'. Below this is a queue list with a 'Dialer' section showing a call to '+14055550100' with a 'Call Cascade Volt Works' button. To the right is a 'Script' section titled 'Has a form, no booking' with a rating of 4.7. The script includes sections for 'Open with', 'What we saw', 'Why them, now', 'Three questions to ask', and 'The ask'. A bottom status bar shows 'Calls today 24 / 250' and a note about contractor proximity.

Auto-dial Off

Company Contact Script Research Notes Disposition Tasks Leads

Has a form, no booking

Chosen because: a quote form and no booking page (rating: 4.7)

Your script for this call

Generated from what the crawler saw on Sep 9, 2026.

1 Open with

Hi — is that South County Electric? My name's Daniel and I'm from FieldQuo. I'm calling because I've been through your website and noticed a couple of things that could help you book more jobs — do you have a few minutes so I can show you how?

2 What we saw

- Your site takes quote requests through a form, but a homeowner can't pick a time — every job waits on a call back.
- A strong Google rating from dozens of reviews — people already trust you; they just can't book you.
- Invoices are paid by cheque or at the door, per your FAQ.

3 Why them, now

Norman is heading into storm season and the shops that let people book a time online are the ones that fill the schedule first.

4 Three questions to ask

- How do quotes get back to a homeowner today — is that you, after hours?
- When somebody wants to pay, what happens?
- How many calls a week do you miss because you're on a ladder?

5 The ask

I can show you in fifteen minutes how it works for a business like yours. What works better for you, mornings or afternoons?

IF THEY SAY...

"We're busy enough."

Added 3 leads open now (PT). 2 closed leads released.

jobs you take — booking online lets you keep the good ones.

Happy to — what should it say you care about most, the booking or the payments? Then

Calls today 24 / 250

Every call moves a contractor closer to getting paid.

The batch topping itself up: under 5 open, three Pacific leads added, two closed Eastern ones released.

[Back to contents](#)

When a contractor rings you back

A call to your number rings inside the portal, whichever /sales screen you are on. A drawer slides down from under the top bar with the business name, the number and whose lead it is, and two buttons: Pick up and Decline. Pick up puts the live call in the Dialer's own slot, exactly where an outbound call sits, with Mute, Hang up and Transfer. Decline hands the call back so the next rep in the ring plan gets it — it does not send the caller to voicemail. Only when nobody picks up does the caller hold while the system looks again, and reach voicemail after that.

Who rings: first the rep whose number was dialled; then whoever rang that contractor last; then the reps who are Available and have been heard from recently — at most three, twenty seconds each. Paused, Off and stale laptops are skipped, which is why your status matters. A caller from a Quebec area code, or a lead the matcher places in Quebec, rings only reps with French.

The screenshot displays the FieldQuo Sales Portal interface. On the left is a dark blue sidebar with navigation options: Today, Queue (highlighted), Playbook, My leads, Conversations, Texts (2), Team (1), Notes, Calendar, My companies, Demo, Support, Voicemail (2), and Pay. At the bottom of the sidebar, it shows 'Calls today 24 / 250' and a note: 'Every call moves a contractor closer to getting paid.'

The main area features a top bar with a search field 'Search your leads by name, city or number', a status indicator 'Available · 12m 00s', and the user's name 'Daniel Roy'. Below this, an 'INCOMING CALL' drawer is open for 'Bright Current Electrical · (918) 555-0123'. It includes a 'Pick up' button and a 'Decline' button. A note states: 'Declining passes them to the next person on the ring plan, not to voicemail.'

The 'Dialer' section shows a phone number '+14055550100' and a numeric keypad. Below the keypad is a green button 'Call South County Electric, LLC'. A note indicates 'Window closes 9:00 PM · Oklahoma's rule'.

The 'Script' section is active, showing a script for 'South County Electric, LLC'. The script includes a title 'Has a form, no booking', a rating 'Chosen because: a quote form and no booking page (rating: 4.7)', and a note 'Your script for this call Generated from what the crawler saw on Sep 9, 2026.' The script is divided into five numbered sections: 1. Open with, 2. What we saw, 3. Why them, now, 4. Three questions to ask, and 5. The ask. It concludes with a section 'IF THEY SAY...' containing two possible responses: 'We're busy enough.' and 'Send me an email.'

The incoming-call drawer, down from under the top bar: business, number, whose lead it is, Pick up, Decline.

[Back to contents](#)

Texts: a chat client, and nothing sends itself

Texts is a chat client, not a list with a compose box. The rooms down the left sit in four groups — Needs a reply · Waiting on them · Drafts due · Done — the conversation is in the middle with day dividers and the red unread line, and the contact is in a bar on the right (Details · Channels · History). Every text goes out from FieldQuo's sales number, and the reply lands in the same thread.

The line over the composer is the lead's texting window in THEIR zone — “Open until 9:00 PM CDT”, or “Closed — opens 8:00 AM”. The zone comes from their province, or from the zone you stated after speaking to them; a state that spans two zones (Florida, Texas, BC) is asked about rather than guessed, and it is never taken from the area code. The server judges the window again at the instant you press Send.

STOP means STOP. A conversation where they replied STOP shows a red STOP tag and no composer — nothing can be sent to that number on any channel, and only a superadmin's written request reopens it. Do not work around it from your own phone.

Check-ins are drafts. Day 1 after a company signs up (did setup go through?) and day 7 (is it working on a real job?), and one more near the 60-day mark when it is due, the draft appears in the thread and under Drafts due with a “Tab to load it” hint. You read it, change it, and press Send. Nothing goes out on its own,

ever. Type ! in the composer for the canned wordings — the Check-in and Sales groups, and the signup link.

New message opens a thread with one of your own leads. New text takes a number you type — Canadian and US only; a Caribbean +1 or anything overseas is refused with the reason, and so is a number another rep holds. A number nobody holds becomes a lead with just the number on it, and the first message is the introduction with the signup link, sent by you.

The screenshot displays the 'FIELDQUO SALES' interface. At the top, there are tabs for 'Today', 'Queue', 'Leads', 'Texts' (selected), and 'Team'. The main area is divided into three sections:

- Texts (Left Sidebar):** A list of message groups categorized by status: 'NEEDS A REPLY' (1), 'WAITING ON THEM' (1), 'DRAFTS DUE' (1), and 'DONE' (2). Each group shows a preview of the message and the time it was received.
- Thread (Center):** A conversation thread for 'Melton Electric' (+1 405 555 0132). It shows a message from 'ME' at 6:28 PM asking if the wife can use invoices. Below this is a 'Draft' section with a text editor containing a message about Rachel from FieldQuo. The draft has buttons for 'Edit', 'When', 'Put away', and 'Send it now'. At the bottom of the thread, there is a 'Draft check-in due Sep 12' and a 'Send it' button.
- Contact Details (Right Sidebar):** A sidebar for 'Melton Electric' showing contact information: Business name, Contact name (Cody Melton), Number (+1 405 555 0132), Email (cody@meltonelectric.com), Trade (electrical), City/Province (Oklahoma City, OK), Time Zone (America/Winnipeg), Lead Stage (Contacted), Lead Score (78 - Sep 10), and Assigned Rep (Rachel K.). There is an 'Open lead' button at the bottom.

Texts: the four groups, a thread with a draft check-in in it, the composer with the window line, the contact bar.

[Back to contents](#)

Team: everybody at FieldQuo, from one screen

Team is FieldQuo's own chat — the reps and the people who back them up, in the same rooms, on the same screen a platform admin sees. Three channels everybody is in: #fieldquo, all of FieldQuo and the one nobody can leave; #sales, the reps on the phones and the people behind them; and #support, where you hand a customer's problem to somebody who can fix it. New group makes a private room with the reps and FieldQuo staff you pick; New message opens a direct message with one person; @ in the composer lists the room's members, and a mention can only name somebody who is in the room. A question asked here is read by somebody who can act on it.

[Back to contents](#)

Languages I can sell in — and why Quebec may not reach you

On Pay, under the portal language, is Languages I can sell in. Tick every language you can take a sales call in. Left unanswered, it reads as English only. Quebec leads go only to reps with French — on a single claim, in the batch, when a lead is moved to you, and when a Quebec number rings in — and the queue tells you how many were held back: “N Quebec leads not offered — add French to your languages on the Pay tab to receive them.” New Brunswick has no such rule. If you speak French, tick it before your first shift; a superadmin can also set it on your rep record.

[Back to contents](#)

Voicemail

A contractor who rings your number when nobody can pick up holds for a moment while the system looks for somebody free, and leaves a message after that. Voicemail is where you hear it: each message with the number, when it was left, how many seconds were spoken, a player, and the lead to open. A zero-second message is shown on purpose — it is somebody who rang back, heard the beep and hung up, and is worth a callback. The badge on the tab counts the messages left since your day started.

[Back to contents](#)

Your pay: one customer, three stages, CA\$125

Everything FieldQuo pays a rep is in Canadian dollars. One customer pays CA\$125, in three stages that follow the customer proving out: CA\$20 when the company is Activated — Stripe has verified them and switched charges on, so they can take money; CA\$40 when they are Renewed — they reach their next billing cycle after the free month, whether Stripe collected or a referral credit covered it; CA\$65 when they are Still paying — still subscribed sixty days from the day they signed up, trial included. The plan is a row on your rep record, so a rep hired on different terms keeps them; and if you leave, what your companies go on to earn is still yours.

Pay shows it: Earned all time, Paid to you, Closed not paid yet, This week so far; every company you brought in with the stage it has reached; and the weeks, each with a Paid date once the run has gone. Weeks close Monday to Monday and the run pays the week before. Nothing on the screen can be edited — it is the ledger the payout is paid from. Below it is where FieldQuo sends the money (Interac e-Transfer for a Canadian account, Wise for a rep outside Canada, PayPal, or a bank transfer), then the portal language, then Languages I can sell in.

[Back to contents](#)

Every feature, by part of the business

All of it, grouped by the part of the business it serves. Each row is the feature's own name and one-line description, the same words the public site uses.

Winning the work

Everything between a stranger hearing your name and a signed price: where the enquiry comes from, what you send back, and how fast.

Lead tracking	Every enquiry in one list, scored hot to cold, with a one-click turn into a quote.
Lead form for your website	A form you can drop on any site; what comes back lands in your leads list, not an inbox.
Quotes	Build a quote from your own rates, group it by room or scope, and add photos.
Good, better, best options	Send one job at three prices and let the client pick the one they want.
Send a quote by email	One button emails the quote from your address, with the PDF attached, in the client's language.
Quote PDF in your colours	A PDF that carries your logo and brand colour — nothing on it says FieldQuo.
Client approves and signs online	The client opens a link, picks any extras, signs, and the job is on — no printing, no phone tag.
AI quote review	Before you send it: what you forgot, how the price sits against the ones you have won, and clearer wording.
Suggested add-ons	Optional extras at the bottom of the quote, priced from your own history, that the client can tick.
Automatic follow-ups	A quote that goes quiet gets chased on your schedule, in your words, without you remembering.
AI receptionist	Answers your phone when you are on a ladder, takes the details, books the visit, and leaves you the recording.
Confirmation calls	The assistant rings ahead to confirm tomorrow's appointments so you do not lose the morning to no-shows.
Quote drafted from the call	What the caller described comes back as a draft quote you open, correct and send.
Online booking page	Clients pick a slot from your real availability, with travel time and arrival windows built in.
Take a deposit to hold the slot	Charge a visit fee at booking and credit it against the invoice when the work goes ahead.
Your own website	A site written from what you already told us, on your own address, that you can edit block by block.
Instant online estimate	A visitor answers a few questions and gets a price range on the spot, from rates you set.

Clients can price their own job	A public form where a homeowner describes the work and uploads photos; it arrives as a started quote.
Kitchen and cabinet designer	Draw the run, pick the finishes, and the cabinet prices and the floor plan go straight into the quote.
Measure from the sky	Type the address and get roof area and pitch, or trace a driveway or patio, without going out there.
Lead funnels	Multi-step landing pages for an ad or a flyer, with numbers on where people drop out.
Email campaigns	Write once, send to your client list from your own address, and see who it reached.
Door-hanger routes	Plan the streets, assign them, and tick off the stops as your crew works the neighbourhood.
Review requests	After the job is done and paid, the client gets one polite ask for a review.
Testimonials on your site	Collect what clients said and show it on your website and in your quotes.
Refer another contractor	Send an invite; when they sign up you both get a free month added to your account.
Drop-in widgets	Paste one line into any website you already have to embed your booking, quote form or reviews.
One link for your profiles	A single branded page for your Instagram or truck decal that points at everything you offer.
Subcontractors	Keep the companies you hire on file, put one on a job at an agreed price, record what you pay them, and track their insurance and year-end tax forms.

Doing the job

Getting the right person to the right address with the right information, and knowing what the job actually cost you.

Jobs	An approved quote becomes a job with the scope, the address and the paperwork already on it.
Scheduling and dispatch	Put visits on the calendar, assign the person going, and see the whole crew's week at once.
Crew shifts	Build next week's rota, publish it, and everyone sees their own shifts.
Repeat jobs	Weekly, monthly or seasonal work that puts itself back on the calendar.
Appointment reminders	The client gets a text before you arrive, so fewer doors are locked when you get there.
Clients reschedule themselves	A link in the confirmation lets the client move the visit without ringing you.

Job costing	Labour, materials and expenses against the price you quoted, so you know what you actually made.
Materials on the job	What went on site, what it cost, and what is still to buy.
Before and after photos	Photos filed against the job, ready to go into the quote, the invoice or your website.
Job checklists	A list of what has to be done on site, ticked off by the person doing it.
Suggested next steps	The job proposes the tasks a job like this usually needs, so nothing gets forgotten.
To-do list	Everything that needs chasing, sorted by what will hurt most if you leave it.
Work areas	Break a big job into rooms or zones and hand each one to a different person.
Clock in and out	Crew clock on against the job they are on, from whatever phone they have.
Timesheets you approve	Hours land tied to real jobs; you approve them before they can turn into pay.
Crew inbox	Your crew text photos and updates to one number and they file themselves against the right job.
Time off and holidays	Requests go to the right manager, balances build up on their own, and the calendar knows.

Getting paid

Invoicing that mirrors your quote, payment the client can make from their phone, and the money landing in your account.

Invoices	An approved quote turns into an invoice that looks like the quote, because it is built from it.
Send an invoice	Emailed from your address with the PDF attached and a pay-now link inside.
Changed invoices, tracked	Amend an issued invoice and the old one is kept, so there is never a question about what was agreed.
Get paid by card	The client pays from their phone and the money goes to your account, not ours.
Your own payout account	Connect your bank once; every client payment settles into it directly.
Let clients pay monthly	Turn on pay-over-time at checkout for the big jobs homeowners put off.
Maintenance plans	Sign a client up to a recurring plan and the card is charged on schedule without you asking.
Client portal	One link where a client sees their quotes, invoices and what they still owe.

Sales tax that matches the address	Set your rates once; the right one lands on the document for where the work is.
---	---

Running the business

Your numbers, your people, your prices, and your name on every document the homeowner sees.

Dashboard	What is quoted, won, scheduled and owed, on one screen, as of this morning.
Your break-even price	What a day has to bring in before you make a cent, worked out from your real overhead.
How your prices compare	Where your rates and your win rate sit against other shops in your trade — nobody named, including you.
Monthly write-up	Once a month, your numbers explained in sentences instead of charts.
Revenue goal	Set a target for the year and see how far ahead or behind you are.
Expenses and overhead	Record what you spend, split what belongs to a job from what belongs to the business.
What your advertising is worth	Log what you spend by channel — including an automatic import from Meta Ads — and see a blended cost per lead across everything you do to bring in work.
Payroll	Approved hours become a pay run with payslips you can hand over or export for your accountant.
Pay contractors from the app	Approved hours for someone on your roster marked as a contractor go out as a real transfer to their bank.
Your price book	Your services and rates in one place, importable from a spreadsheet and exportable back out.
Material costs and recipes	What a litre of paint or a sheet of ply costs you, and how much of it a job of this size eats.
Team roles and access	Decide, dial by dial, what each person can see and change — and it holds on the server, not just on screen.
Everything carries your name	Your logo and your colour on every quote, invoice, page and email a homeowner sees.
Email from your own address	Verify your domain once and everything goes out from you, not from a shared address.
Write your own covering email	Change what the quote email says, section by section, and it stays in the language the quote was written in.

Your own quote and invoice layout	Choose which sections appear on the printed document, and which one is the default.
Your terms on every document	Payment terms and contract wording that attach themselves to what you send.
Your client's language	Send a quote in the language your client speaks; a signed document keeps the words it was signed with.
Ask FieldQuo AI	Ask a question about your own business in plain English and get the answer from your own numbers.
Who changed what	A running record of every send, edit and approval, with a name and a time against it.
Client list	Every client, their properties and their history, imported from wherever it lives now.

Glossary

The words a contractor may not know, and the ones we use differently from our competitors.

Activated · Renewed · Still paying

The three stages of your pay for one customer — CA\$20 when their Stripe account can take money, CA\$40 when they reach their next billing cycle, CA\$65 when they are still subscribed sixty days from the day they signed up.

Add-on

An extra the client can accept on the quote itself, priced by the server rather than the browser. The homeowner ticks it; the total updates. [See Suggested add-ons](#)

Batch

The 25 leads the server hands you in one press of Claim the next 25 — only leads whose calling window is open at that minute. Tops itself up when fewer than 5 can still be rung.

Break-even price

The price below which a job loses the contractor money, worked out from their own overhead and labour rather than a rule of thumb. [See Your break-even price](#)

Calling window

The hours a business may legally be rung, in its own time zone, from its state's or province's rule. The console never shows a Call button outside it.

Check-in draft

A text FieldQuo writes for you and puts in the thread — day 1 and day 7 after a company signs up, and near the 60-day mark. You edit it and press Send. Nothing sends it for you.

Crew login

Somebody who clocks in, reads their schedule and adds photos. Free, and does not use a seat. [See Crew shifts](#)

Crew inbox

Texting with crew who have no login and will not install an app. They text a number; it lands in the office filed against them. [See Crew inbox](#)

Disposition

What happened on the call, picked from ten outcomes, with the next step. Saving it is what ends “Writing it up” and, with Auto-dial on, what rings the next lead.

Instant estimate

A price a homeowner produces themselves on the contractor's website, from the contractor's own rates. Never our rates. [See Instant online estimate](#)

Job costing

Quoted against actual, after the work — so next year's prices are built on what happened. [See Job costing](#)

Lead

A contractor we want as a customer. The ones the queue hands you and the ones you typed in yourself are both leads; the word “prospect” is not used.

Price book

The contractor's own rates for labour, materials and services. Everything priced in FieldQuo comes from here. [See Your price book](#)

Seat

Somebody who creates and changes quotes, jobs and invoices. Seats are the only thing the plans differ by. [See Team roles and access](#)

Status

What you have told the portal you are doing — Available, Break, Dinner, Meeting, Training or Off. Incoming calls ring only reps who are Available; the two states the system sets itself are On a call and Writing it up.

Takeoff

The trade-specific form that turns measurements into a priced quote — squares of roof, linear feet of gutter, doors and drawers. [See Quotes](#)

Vision pass

The paid deep photo read. Distinct from the free review, which also looks at photos but does not charge.

White label

Every document a homeowner sees carries the contractor's name and colours, not ours. This is the default, not an upgrade. [See Everything carries your name](#)

Zone chips

All · ET · CT · MT · PT above your list. Pick one and the list, Next and Auto-dial stay in that time zone.
