
FieldQuo Sales Portal — Training Manual

How to sign in, claim leads, make the calls, send the texts, and get paid for the companies you bring in.

Generated 2026-09-12 · 13 chapters · for new sales reps

Read this beside the portal on your first day. Every chapter ends with something to try in your own demo account, so nothing here is theory by the time you take your first call.

Welcome, and how this manual works

You are joining a small team that sells one product to one kind of customer. This chapter says what that product is, what your day looks like, and how to read the rest of this book.

What FieldQuo is, in three sentences

FieldQuo is software for field-service contractors — painters, roofers, plumbers, cabinet makers, landscapers — usually one to twenty people, often run from a van. It lets a contractor win a job, do the job and get paid without leaving one app: the quote, the schedule, the invoice and the card payment all carry the contractor's own logo and name, never ours.

Every feature is in every plan. The four plans differ only by how many people can use it. That is the whole pitch, and it is true.

What a rep does all day

Four verbs. **Dial** — you claim researched contractors from a queue and ring them inside their legal calling window. **Text** — you follow up from a shared FieldQuo number, with your signup link. **Book demos** — a fifteen-minute look at a real FieldQuo account, yours, set up as their trade (the calendar blocks thirty). **Get companies signed up and kept** — a company that signs up on your link is credited to you, and you are paid at three milestones as it activates, renews and stays.

Everything in the portal exists to serve one of those four. If a screen does not obviously do one of them, this manual says what it is for.

How to read this book

Chapters run in the order of your first week: your account, your demo, the console, then the calls, the texts, and what happens after a company signs up. Chapter 11 is the rules — short, and the ones that matter legally. Chapter 12 has a day-one checklist, a glossary and where to look things up.

Every screen is described three ways: **Do this** (what to press), **You'll see** (what appears), **Why it matters** (what the product is protecting you from). Numbered walkthroughs are meant to be followed with the portal open.

Words shown like **Claim the next 25** are the exact words on the screen, in the language you set for the portal. If the screen says something different, the screen is newer — tell the team in #sales.

Vocabulary

One word we use on purpose: **lead**. Every business in your queue, in your pipeline and in your texts is a lead. The word “prospect” does not appear in the portal and does not need to appear in your calls.

Try it in your demo account

1. There is nothing to try yet — you do not have a demo account until Chapter 2.
2. Open the portal at **fieldquo.com/sales** in the browser you will work from, and keep it open beside this manual.

[Back to contents](#)

CHAPTER 1

Your account

Signing in, the invitation that created you, the two language settings that decide what you see and which leads you get, and the tour.

Where to sign in

The portal lives at **fieldquo.com/sales**. Opening it without a session lands you on the sign-in page, which says *“FieldQuo sales team only. A company account won't sign you in here.”* — a contractor's FieldQuo login does not work here, and yours does not work in a contractor's app. They are two different doors.

Figure 1 — The sales portal sign-in page — the only door for reps.

DO THIS

1. Type your **Email** and **Password**.
2. Press **Sign in**.

YOU'LL SEE

The button reads **Signing in...** for a moment, then the portal opens on Today. A wrong email or a wrong password both say **Those sign-in details were not accepted.** — the same sentence, on purpose, so nobody can probe which emails are on the team.

WHY IT MATTERS

Your session lasts twelve hours, then you sign in again. There is no “forgot password” link: if you lose yours, ask a FieldQuo superadmin for a new invitation, which lets you set a fresh one.

The invitation

Nobody signs themselves up to sell FieldQuo. A superadmin added you on the platform's reps screen, and you received an email titled “Set up your FieldQuo sales portal account” with a button. That link works once and expires after seven days.

1. Open the link. The page checks it (**Checking your invitation...**) and then shows **Set your password**, with “*You've been added to the FieldQuo sales team as you@example.com.*”.
2. Choose a password of at least twelve characters and type it twice (**Choose a password**, **Type it again**). The reason for twelve is printed on the page: “*Choose a password of at least 12 characters — this account can see every company you've brought in.*”
3. Pick **Portal language** from the drop-down — the page re-renders in that language as you change it.
4. Press **Set password and sign in**. You are signed in and taken to the welcome page.

If the link has already been used you see “*This invitation has already been used. Sign in with the password you set, or ask for a new invitation if you've forgotten it.*” If it is older than seven days: “*This invitation has expired. Ask a FieldQuo superadmin to send a new one.*” Either way the fix is the same person — a superadmin, not support.

The welcome page: two things, neither urgent

The first screen after the invitation is **Welcome to FieldQuo**. It says “*Two things before you start, and neither of them is urgent. You can skip both and set them later from the Pay tab — nothing in the portal is locked until you do.*” Both settings also live on the Pay tab, so skipping is safe.

- **Where should we send your commission?** — where FieldQuo sends your commission. The page explains why it is the one worth doing today: “*FieldQuo pays commission in weekly batches. Until there is a destination on file the ledger knows what you are owed and has nowhere to send it, so this is the one worth doing today.*”
- **What language should the portal be in?** — the language of every screen in the portal.
- **Languages I can sell in** — which languages you can run a sales call in. This one decides which leads you are handed, so read the next section before you skip it.

Two language settings, and why they are separate

The portal has two language controls, both on the Pay tab, and new reps mix them up. The screen itself draws the line: *“Tick every language you can run a sales call in. This is separate from the portal language above: that one is the words on your screen, this one is which leads the queue may hand you.”*

DO THIS

1. Open **Pay** in the sidebar.
2. Under **What language should the portal be in?**, pick a language or **Follow my browser**, then press **Save language**.
3. Under **Languages I can sell in**, tick every language you can sell in, then press **Save languages**.

YOU'LL SEE

Saved. after each. The portal changes language immediately — sidebar, sign-in page and tour. The tick list shows each language by its own name (Français, Español...).

WHY IT MATTERS

“Quebec leads need French; everywhere else needs English. You receive only the leads your languages cover.” Until you tick anything, the queue assumes English only: *“Nothing ticked yet. Until you tick French, the queue treats you as English-only and holds every Quebec lead back.”*

Quebec needs French

Quebec leads go only to reps with French ticked. That is the owner's rule, enforced in the database query that claims leads — not in a filter you could switch off. A Quebec business carries the chip **Français** in your queue, and when a batch skips leads for this reason the console tells you how many: *“4 leads not offered — they need a language you haven't set: French for Quebec, English everywhere else. Add it on the Pay tab.”*

New Brunswick leads carry no language requirement; every other province and every US state needs English.

What the portal language cannot change is spelled out on the screen: *“This changes every screen in the portal, the sign-in page and the guided tour. What it cannot change is text somebody else wrote: a lead's own words, a note you typed, and the message the server sometimes sends back when something fails.”* A lead's own words stay in the language they wrote them.

Screenshot to follow

The Pay tab: payout destination, portal language, and “Languages I can sell in”. — this capture is taken from the live portal and will appear here in the next build.

Figure 2 — The Pay tab: payout destination, portal language, and “Languages I can sell in”.

The tour

The first time you open the portal a panel titled **Your guide to the portal** offers **Take the tour**. It is twenty-two short steps, each pinned to a real control, and it follows your portal language. You can stop and come

back — the button then reads **Resume the tour (7/22)** — or press **Don't show me this again**. Take it once, today, after this chapter.

The sidebar, in order

Fourteen entries, always in this order. The rest of this manual refers to them by these names.

ENTRY	WHAT IT IS	CHAPTER
Today	One sentence saying what to do next, your signup link, and today's counts.	10
Queue	The console: claim, research, dial, write up.	3, 4, 5
Playbook	The scripts, the objections, the competitor battlecards.	10
My leads	Your own pipeline: leads you typed in or carried over from the queue.	10
Conversations	Email conversations with your leads, sent from your work mailbox.	10
Texts	Every text conversation, from FieldQuo's shared sales number.	7
Team	Team chat: #fieldquo, #sales, #support, groups and direct messages.	9
Notes	Your notes, and nobody else's.	10
Calendar	Callbacks you promised, demos and walkthroughs you booked.	10
My companies	The companies credited to you, with their subscription and milestones.	8
Demo	Your demo account.	2
Support	Technical problems at one of your companies, raised as a ticket.	8, 10
Voicemail	Messages left on your own number.	6
Pay	Earnings, payout destination, both language settings.	10

Under the list sits **Calls today** with a count out of 250 and a bar, and the line *“Every call moves a contractor closer to getting paid.”* On a phone the first five entries are a bottom tab bar and the rest are in a drawer.

Try it in your demo account

1. Sign in at fieldquo.com/sales. Sign out (**Sign out** , top right) and sign in again, so you know where both are.
2. Open **Pay** , set your portal language, and tick the languages you can sell in. Watch the sidebar change language the moment you save.
3. Press **Take the tour** and take the tour to the end.

[Back to contents](#)

Your demo account

A real FieldQuo company, with sample data in it, that belongs to you alone. It is where you learn the product and where you show it.

What it is

Open **Demo**. The page is titled **Your demo account** and says: *“A real FieldQuo company with real data in it, that belongs to you. Sign into it and drive it while somebody watches — write a quote, send it, take the payment. Nothing in it is a customer’s, so you can break it and put it back.”*

One rep, one demo. The assignment is unique in the database — nobody shares yours, so nobody can reset it out from under you mid-walkthrough, and a quote you built for your own practice is still there tomorrow. It is not impersonation (which is read-only and superadmin-only): you sign into the demo company as a user of it and can write a quote in front of a lead.

Getting one

DO THIS

1. If the page says **You don’t have one yet**, press **Claim a demo account**.
2. Read the amber box that appears. It tells you exactly what to ask a superadmin for, word for word.

YOU’LL SEE

Before claiming: **Free right now: 3 of 6.** After claiming, the company is yours but has no login yet — **It has no sign-in yet** — and the box quotes the request to send: *“Please open /platform/demo, find Demo 3 (demo3), and press Assign with a password so demo3@fieldquo.com can sign in.”*

WHY IT MATTERS

“Claiming assigns you the company. Signing into it needs a password, which only a FieldQuo superadmin can set — this screen will tell you exactly what to ask for once you have one.” The sign-in address is fixed — it is built from the company’s slug, like demo3@fieldquo.com — and only a superadmin can set the password. Once they have, the page says *“Sign in at demo3@fieldquo.com. The password is set by a FieldQuo admin — ask for it once and it keeps working. It is not shown here because this screen cannot set it.”*

A FieldQuo admin can also assign a particular demo to you directly from the platform’s demo screen. Either way, once a login exists the button **Open the demo company** opens it in a new tab — *“Opens in a new tab so this portal stays where it is — mid-demo you may want to change the trade or wipe the data without navigating out of what the lead is looking at.”*

If every demo is taken you see *“6 by other reps, so there is none to claim. Ask a FieldQuo superadmin to add one, or to release one that a rep who has left is still holding.”* If none exist yet: *“There are no demo*

companies at all yet. Ask a FieldQuo superadmin to seed them — nothing on this screen creates one.”

Nothing on this screen creates a company; ask in #sales.

Switching it to the lead's trade

The card **What trade it is set up as** explains itself: *“A roofer watching a cabinet maker's quote is doing translation work while you talk. Switch it to their trade before the call and the services, the prices and the wording are all theirs.”* Pick from the ten trades (painting, cabinet refinishing, flooring, landscaping and lawn care, cleaning, plumbing, HVAC, roofing, electrical, handyman / general contracting) and the page shows **Rebuilding it as that trade...** while the sample data is rebuilt.

Switching trade is destructive

Switching trade rebuilds the company's data — every quote, job, client and invoice in it is replaced by that trade's samples. Do it before the demo, not during one you want to keep.

Resetting it

DO THIS

1. On the card **Start it clean**, press **Reset the data**.
2. Read the confirmation and press **Yes, wipe it** — or **Leave it alone**.

YOU'LL SEE

“This clears every quote, job, invoice and client in your demo company. It cannot be undone, and it affects nobody but you.”

WHY IT MATTERS

“Wipes everything you did in it and puts the sample data back. Worth doing after every demo, so the next lead does not open a quote addressed to the last one.”

What you use it for

- **Learning the product.** Write a quote, send it, approve it as the client, turn it into a job, invoice it, take the card payment. Do the whole pipeline once before your first call, so that every sentence in the script is something you have seen happen.
- **The fifteen-minute demo** — the ask at the end of every script. Set the trade to theirs first; open the demo company in one tab and the portal in another.
- **Walkthroughs with a customer** after they sign up. A company that has finished onboarding can be offered a one-hour walkthrough with a specialist from the call panel (Chapter 8); your demo is where you practise the route.

What never sends from it

Nothing leaves a demo company and reaches the outside world. Emails and texts are recorded as sent and simulated — the quote flips to “sent”, the log shows it, and no message goes out. Stripe top-ups credit the ledger without charging a card. A demo cannot buy a real phone number; it is given a fictional 555 number that cannot be dialled. So you can press every button in front of a lead and nobody's inbox, phone or card is touched.

Demo, not customer

The demo is yours; a customer's company is theirs. You never sign into a customer's FieldQuo account, and the portal gives you no way to — **My companies** shows their subscription and milestones, never their quotes or clients.

Screenshot to follow

The Demo page with a company assigned: trade, reset, and the sign-in address. — this capture is taken from the live portal and will appear here in the next build.

Figure 3 — The Demo page with a company assigned: trade, reset, and the sign-in address.

Try it in your demo account

1. Claim a demo, get the password from a superadmin, and open it with **Open the demo company**.
2. Build one quote for a fictional homeowner, send it (it is simulated), approve it as the client, and take the payment.
3. Come back to the portal and press **Reset the data**. Confirm. Open the demo again and check the quote is gone and the samples are back.
4. Switch the trade to roofing and look at how the services and prices changed.

[Back to contents](#)

The console

Queue is the room you sell from. One screen: the list of leads you hold, the dialer, and a tabbed card with everything known about whoever is open.

The page is titled **Today's queue** and the line under it is the rule for the day: *“Your claims, whoever you are on, and the call controls in the same place every time. One trade at a time — you get better at a script by saying it forty times, not by switching every call. What we could not establish says so.”*

Figure 4 — The console at rest: sidebar, top bar with the status menu, the folded queue rail, the Dialer on the left, the tabbed card on the right with Script open.

The layout

- **Top bar** — search (when the screen has one), your status, your name, sign out.
- **The queue rail** — folded by default (**Show the list** / **Hide the list**); unfolded it shows the trade picker and your leads grouped by calling window. Chapter 4.
- **Walk controls** — **Previous** · **1 of 11** · **Next**, and under them **Next in queue** with the next business's name and window. The last row says **This is the last lead in your list.**

- **The Dialer** (left) — a phone. Display, keypad, the call button, the calling-rules line.
- **The tabbed card** (right) — **Company** · **Contact** · **Script** · **Research** · **Notes** · **Disposition** · **Tasks** · **Leads** · **Maximize** makes it fill the screen.

Your status

The status menu in the top bar is one tap. Six choices: **Available** · **Break** · **Dinner** · **Meeting** · **Training** · **Off**. Two more states you never pick are set by the call itself: **On a call** while you are dialled in, and **Writing it up** between hanging up and saving the outcome.

The screenshot displays the FieldQuo Sales Portal interface. On the left is a dark blue sidebar with navigation options: Today, Queue (highlighted), Playbook, My leads, Conversations, Texts (3), Team (1), Notes, Calendar, My companies, Demo, Support, Voicemail (2), and Pay. The main area is divided into three sections. The top section, 'Yours to work', shows a search bar and a list of trades to claim. The middle section, 'Dialer', features a numeric keypad and a call button for '+14055550100'. The bottom section, 'CALLABLE NOW', lists three leads: 1. South County Electric, LLC; 2. Bright Current Electrical; and 3. Red Dirt Wiring Co. On the right, a status menu is open, showing options: Available (selected), Break, Dinner, Meeting, Training, and Off. The menu also displays the user's current status as 'Available · 12m 00s' and the name 'Daniel Roy'.

Figure 5 — The status menu open.

DO THIS

1. Press **Available** when you sit down.
2. Pick a paused reason when you step away; press **Available** when you are back.
3. Press **Off** at the end of your shift.

YOU'LL SEE

The button shows **Available · 2h 10m**. If the portal has not heard from your browser for fifteen minutes it adds **(not heard from lately)**.

WHY IT MATTERS

Callbacks only ring you while you are Available, and auto-dial only runs then. You cannot go on a break from inside a call — finish and write it up first. Your first Available of the day also starts your seven-hour shift clock, which the queue uses to decide which leads can still be reached today.

Calls today

Under the sidebar: **Calls today** and a figure such as 42 / 250. The 250 is the daily ceiling on claims; the left-hand number is every call you dialled today, answered or not. Nobody expects 250 — the owner's arithmetic is about two hundred dials in a seven-hour shift, with room.

The Dialer

It looks like a phone because it is one: calls go out through your browser, from your own FieldQuo number, with your headset. The display shows **Number to ring** and the chosen number; when a business has more than one, **Which number?** lets you pick.

- **The rules line.** Above the call button the console says whether you may ring this one now: **You may ring this one now.** or **You may not ring this one right now.** with the reason under it, and the window itself — for example *“09:00–21:30 on weekdays and 10:00–18:00 at weekends, in the lead's own time zone.”* — tagged **Ontario's rule** or **FieldQuo's rule (Nevada sets none)**.
- **The cap line.** Where a state caps attempts, a line reads **1 of 3 calls in 24 h · Oklahoma**. The cap counts calls to that business by anybody, not by you.
- **The keypad.** Before a call it types a number. During a call it sends tones: *“A call is up: the keys send tones to the other end.”*
- **Auto-dial** — the switch described in Chapter 5.
- **No button at all.** When a record cannot be rung the button is not greyed out, it is absent, with a sentence in its place: *“No dial control is shown, because pressing one would be a mistake rather than a refusal.”*

Figure 6 — On a call: the timer, the caller-id notice, Mute and Hang up in the Dialer; the keypad in tone mode.

On a call the Dialer shows the timer, **Mute** and **Hang up**, and the notice *“They can see your number. Say it out loud — a callback number is part of identifying yourself in Canada, and it is the number that reaches us.”*

Typing a number the owner gave you

A contractor says “ring my cell instead”. Key it on the pad or type it into the field (**Type or key in a number**).

DO THIS

1. Type the number in full, with the area code.
2. Press **Dial**.

YOU'LL SEE

Under the display: *“Not one of the business's stored numbers — Call saves it on this lead first, then rings it through the same checks.”*
The number is saved on the lead labelled **Read out on a call**, then rung. A half number gets *“That isn't a number we can dial. Put it in full, with the area code.”*

WHY IT MATTERS

Every past call, text and opt-out is filed against the business's numbers, so a number you dial has to be on the record first. The same checks apply to a typed number as to a stored one — a business that asked us to stop refuses it: *“This business asked us to stop, so no further numbers are recorded for them.”*

FieldQuo Sales Portal — Training Manual

19

The screenshot displays the FieldQuo Sales Portal interface. On the left is a sidebar with navigation options: Today, Queue, Playbook, My leads, Conversations, Texts (3), Team (1), Notes, Calendar, My companies, Demo, Support, Voicemail (2), and Pay. The main area is divided into two sections. The left section is the 'Dialer', showing a list of leads with the number 4055550666 highlighted. A message states: 'This business asked not to be contacted, so no further numbers are recorded for them.' Below this is a numeric keypad and a green button to 'Call South County Electric, LLC'. The right section is the 'Script' tab, which provides a structured approach for the call. It includes sections for 'Open with', 'What we saw', 'Why them, now', 'Three questions to ask', and 'The ask'. The script is generated from a crawler's data from Sep 9, 2026.

Figure 8 — A typed number refused: the business is do-not-contact, so nothing dials.

The **Contact** tab has the fuller form for a number they gave you — **They gave us another number** — asking **What kind of line is it?** and **Did they say what to use it for?**. Answer honestly: *“What they told you beats what the line looks like. If they say a landline forwards to their phone and to text it, say so here — no lookout knows that.”*

The tabs

Company

Name, **Address**, **Website**, **Phone**, **Email** with its **Source: their site**, tags such as **Score 72** or **Existing customer**, **What their site does** and **Software they run** from the crawl, and a **Dial** beside each number. **Edit** opens the fields. A field nobody has filled says **None on record** — not a guess.

The screenshot shows the FieldQuo Sales Portal interface. On the left is a dark blue sidebar with navigation icons and labels: Today, Queue (highlighted in orange), Playbook, My leads, Conversations, Texts (with a red badge '3'), Team (with a red badge '1'), Notes, Calendar, My companies, Demo, Support, Voicemail (with a red badge '2'), and Pay. At the bottom of the sidebar, it shows 'Calls today 24 / 250' and a note: 'Every call moves a contractor closer to getting paid.' The main area has a search bar at the top: 'Search your leads by name, city or number'. To the right of the search bar, it says 'Available - 12m 00s' and 'Daniel Roy'. Below the search bar, there are navigation buttons: '< Previous', '1 of 11', and 'Next >'. A status bar at the top right says 'Next in queue: Bright Current Electrical - Window closes 9:00 PM'. The central part of the screen is the 'Dialer' window, which shows a phone number '+14055550100' and a numeric keypad. Below the keypad is a green button that says 'Call South County Electric, LLC'. To the right of the dialer, there is a 'Company' tab for 'South County Electric, LLC'. This tab shows various details: 'Electrical - Norman, OK', 'Time zone America/Chicago (stated by the lead)', a description of the company, address '2104 W Main St - Norman, OK, US', website 'southcountyelectric.com', and two phone numbers with 'Dial' buttons. It also shows an email address 'office@southcountyelectric.com' and a 'Score 78' tag. At the bottom, there are tags for 'Has a website', 'No online booking', 'No online payment', 'Has a quote form', 'We don't know whether they have live chat', and 'Shows reviews'. A note at the bottom says 'Claimed by you until 4:12 PM tomorrow.'

Figure 9 — The Company tab: details, tags, what their site does, Dial beside each number.

Contact

Who to ask for. **We think this is the owner.** comes with **Why we think so**; otherwise **No contact name found yet.** Under it the numbers, the add-number form, and **Call history** (**Outbound call** , **Inbound call** , **Missed call**).

Script

The call, written for this business: numbered steps, **Key talking points** on the right, and the **Goal** . Chapter 5 takes it apart.

Research

Three layers, kept apart on purpose: **What we observed** , **What we infer** , **What to pitch** — and a fourth block, **What we do not know** , “*Said out loud here so it is not guessed at on the call.*”

0 reviews

What their site does

Has a website
southcountyelectric.com

No online booking

No online payment

Has a quote form

We don't know whether they have live chat

Shows reviews

Google rating on the home page.

Software they run

Their site runs on Wix. No field-service software detected.

What we infer

Conclusions the evidence supports and does not prove. Never say one as a fact.

We think: Dave Hensley (Owner)
82% confident. Derived from what we observed. This is not a fact — do not say it as one.

Figure 10 — The Research tab: what we observed, what we infer (“We think...” with a confidence), what to pitch, what we do not know.

Notes

Your notes on this business — a box that asks *“What did they say? Type it while you can still hear it.”* Saved against the business, readable by you and by FieldQuo superadmins, never by other reps.

Disposition

Empty until a call ends (**No call to write up**); then the outcome form. Before a call it lists the ten outcomes it will ask for, so you know them in advance.

Tasks

Leads

No call to write up

When a call ends, the outcome form appears here. These are the outcomes it will ask for:

No answer

Busy

Voicemail — I left a message

Wrong or dead number

Someone answered, but not the owner

They asked me to ring back

Spoke to them — interested

Spoke to them — not interested

Not a business we can sell to

Asked not to be called again

Next step

Book a 30-minute demo

Sent to sign up

A walkthrough is booked from a lead, so the company it is for is known. Work the lead as a lead first.

Schedule a call back

When you are done

I spoke to them — keep this one

Put it back in the pool

It stops lapsing and stays yours. A real conversation is not a lease.

Work this one as a lead

Copies the name, the number and where they are onto a lead, so you can email and text them. It stays claimed by you either way.

Stop working this one

Permanent on this lead — it survives every pipeline stage and there is no control anywhere that lifts it. It does not put the number on FieldQuo's do-not-contact list: if they said it on the phone, close

Figure 11 — The Disposition tab before a call: the ten outcomes listed.

Tasks

Callbacks promised and **Check-in drafts due** for this lead only — *“Only callbacks you logged and check-in drafts for this lead's number. Your calendar has the rest.”*

Has a form, no booking

Chosen because: a quote form and no booking page (rating: 4.7)

Your script for this call

Generated from what the crawler saw on Sep 9, 2026.

1 Open with

Hi — is that South County Electric? My name's Daniel and I'm from FieldQuo. I'm calling because I've been through your website and noticed a couple of things that could help you book more jobs — do you have a few minutes so I can show you how?

2 What we saw

- Your site takes quote requests through a form, but a homeowner can't pick a time — every job waits on a call back.
- A strong Google rating from dozens of reviews — people already trust you; they just can't book you.
- Invoices are paid by cheque or at the door, per your FAQ.

3 Why them, now

Norman is heading into storm season and the shops that let people book a time online are the ones that fill the schedule first.

4 Three questions to ask

- How do quotes get back to a homeowner today — is that you, after hours?
- When somebody wants to pay, what happens?

Figure 13 — The queue rail unfolded: the trade picker, the day grouped by window, the current row highlighted.

On a phone

The Dialer comes first, then the tabbed card; the queue is a drawer (**Show the queue (11)**). Everything works, but plan on a laptop and a headset for a shift.

Figure 14 — The console on a phone: dialer first, the queue as a drawer.

Try it in your demo account

1. Open **Queue**. Set your status to **Available**, then **Break**, then back. Watch the duration reset.
2. Unfold the rail, then fold it. Click each of the eight tabs on an empty console and read what each one says when nothing is open.
3. Type your own mobile number into the Dialer field and read the note under it. Do not press Dial — you hold no lead yet.

[Back to contents](#)

Claiming leads

You do not browse the pool; you take the next twenty-five that can be rung right now. The batch tops itself up, gives back what has gone quiet, and caps itself at 250 a day.

Why claiming exists

The queue's own words: *"Pick a trade to claim a new lead. Claiming is what stops two reps phoning the same contractor, so there is no way to work one without it. The numbers beside each trade are counts, not a list — nobody gets to read the pool and pick."* A claim holds that business for you for 48 hours; once you have actually spoken to them, **I spoke to them — keep this one** makes it yours for good — *"It stops lapsing and stays yours. A real conversation is not a lease."*

Claim the next 25

DO THIS

1. Unfold the rail. Under **Which trade are you calling today?** pick one trade — one, and stay on it.

2. Press **Claim the next 25** (or **Just one**).

YOU'LL SEE

A summary such as *"Claimed 25: 19 researched, 6 waiting on research."* Then your list, grouped: **Callable now**, one group per opening time (**Opens at 11:00 (PT)**), and **Not callable today**. The first row opens in the console.

WHY IT MATTERS

"Only leads whose calling window is open right now, closing soonest first — researched ones ahead. Under 5 open, the next batch is added on its own. 225 claims left today, out of 250." "Closing soonest first" means a Newfoundland shop at 8 pm their time comes before a Vancouver shop at lunch — the batch is ordered by who you would lose first.

Each trade in the picker shows counts, not names: **Roofing — 25 claimed, 340 free**. A trade with **Nothing free right now** has nothing open right now.

What the batch may tell you instead

SENTENCE	WHAT HAPPENED
9 open now — more open at 8:00 AM ET.	Fewer than 25 were open; the rest of the trade opens later. You got the nine.
<i>"No leads are open right now in this trade — the next window opens at 8:00 AM ET."</i>	Nothing in this trade can be rung this minute. Pick another trade or wait.

SENTENCE	WHAT HAPPENED
<i>“12 left in the pool — their calling window is shut for the rest of your shift.”</i>	Those twelve open only after your shift ends. They stay in the pool for tomorrow.
<i>“4 leads not offered — they need a language you haven't set: French for Quebec, English everywhere else. Add it on the Pay tab.”</i>	Quebec leads you cannot take. Chapter 1.
<i>“You have reached today’s ceiling of 250 claims. Tomorrow starts fresh.”</i>	250 claims today, released or not. Tomorrow starts fresh.
<i>“The pool for this trade ran dry. Discovery has to run again before there is more.”</i>	Discovery has to find more businesses in that trade.
<i>“Another rep claimed these leads while you were pressing the button. Try again.”</i>	Two reps pressed at once; the database gave them to one. Press again.

The zone chips

Above the list: **All** · ET · CT · MT · PT (and AT, NT when you hold any). A chip filters the list and the walk — **Next** and auto-dial follow the filter. Under a selected chip the console says **open until 9:30 PM ET** or **closed — opens 11:00 AM** .

Call South County Electric, LLC

What Oklahoma actually says

1 of 3 calls in 24 h · Oklahoma

Auto-dial Off

Company Contact Script Research N

Has a form, no booking

Chosen because: a quote form and no booking page (rating: 4.7)

Your script for this call

Generated from what the crawler saw on Sep 9, 2026.

1 Open with

Hi — is that South County Electric? My name's Daniel and I'm from FieldQuo. I'm calling because I've been through your website and noticed a couple of things that could help you book more jobs — do you have a few minutes so I can show you how?

2 What we saw

- Your site takes quote requests through a form, but a homeowner can't pick a time — every job waits on a call back.
- A strong Google rating from dozens of reviews — people already trust you; they just can't book you.
- Invoices are paid by cheque or at the door, per your FAQ.

3 Why them, now

Norman is heading into storm season and the shops that let people book a time online are the ones that fill the schedule first.

4 Three questions to ask

- How do quotes get back to a homeowner today — is that you, after hours?
- When somebody wants to pay, what happens?

Figure 15 — PT selected: the list filtered inside its window groups, “closed — opens 11:00 AM” under the chip, the walk following the filter.

The batch tops itself up

The header line over your list reads “3 open now · 6 closed · next batch auto-adds below 5”. When fewer than five of your held leads are callable now, the console claims the next batch on its own — at most once a minute — and, before it does, gives back your untouched leads whose window is shut for the rest of your shift.

DO THIS

1. Nothing. Keep dialling.

YOU'LL SEE

A quiet toast: Added 3 leads open now (PT). 2 closed leads released. New rows appear in their window groups; the released ones vanish.

WHY IT MATTERS

A lead you never dialled that cannot be rung again today is worth more in the pool, where a rep on the west coast can take it, than on your list. Released leads carry no mark against you; the reason recorded is “closed”, and it does not push the lead down your list the way Put it back in the pool does.

Call Cascade Volt Works

What Oregon actually says

Auto-dial Off

Company Contact Script Research Notes Disposition Tasks Leads

Has a form, no booking

Chosen because: a quote form and no booking page (rating: 4.7)

Your script for this call

Generated from what the crawler saw on Sep 9, 2026.

1 Open with

Hi — is that South County Electric? My name's Daniel and I'm from FieldQuo. I'm calling because I've been through your website and noticed a couple of things that could help you book more jobs — do you have a few minutes so I can show you how?

2 What we saw

Your site takes quote requests through a form, but a homeowner can't pick a time — every job waits on a call back.

A strong Google rating from dozens of reviews — people already trust you; they just can't book you.

Invoices are paid by cheque or at the door, per your FAQ.

3 Why them, now

Norman is heading into storm season and the shops that let people book a time online are the ones that fill the schedule first.

4 Three questions to ask

1. How do quotes get back to a homeowner today — is that you, after hours?

2. When somebody wants to pay, what happens?

3. How many calls a week do you miss because you're on a ladder?

5 The ask

I can show you in fifteen minutes how it works for a business like yours. What works better for you, mornings or afternoons?

IF THEY SAY...

"We're busy enough."

jobs you take — booking online lets you keep the good ones.

Happy to — what should it say you care about most, the booking or the payments? Then

Added 3 leads open now (PT). 2 closed leads released.

Figure 16 — The rolling batch topping up: three Pacific rows added, two dead Eastern rows released, the toast and the header line.

When everything is shut

Late in the day the console may show *“All 8 of your leads are outside their calling window right now.”* with one button, **Claim the next 25** — which claims only what is open now. If the whole trade is shut, the button tells you when the next window opens.

FieldQuo Sales Portal — Training Manual

30

Figure 17 — 9:20 pm Eastern with every held row shut: the sentence and the one button.

Giving leads back

- **Release the rest (14)** — “Gives back every lead you have not dialled. Ones you called stay yours. This also happens on its own at the end of your day.” It reports **Released 14. Kept 11 you had already called.**
- **Put it back in the pool** — one lead, from its row. A lead you gave back sorts last for you for a week, so the pool does not hand it straight back.
- **Stop working this one** — permanent for this lead, with a reason (**Why should we stop working this one?**). Read the note under it before using it: it is not the do-not-contact list. If they said it on the phone, the disposition **Asked not to be called again** is the one that binds every rep and every channel.

A lead's row tells you its state: **Claimed, not called yet** , **Worked** , **Last call: No answer** , **Researched ✓** or **Researching...** , and **Window closes 9:30 PM** .

An empty queue is an empty queue

“Nothing is invented to fill this screen. An empty queue is an empty queue.”

Try it in your demo account

1. Pick the trade your demo is set to and press **Claim the next 25**. Read the summary line and count the window groups.
2. Click each zone chip and watch **1 of 11** change.
3. Press **Release the rest (25)** — you have called nobody, so all of them go back. Read the result line. Claim again.

[Back to contents](#)

The call

Read the research, read the script, ring inside the window, say what is true, and write up exactly what happened. The console is built so that the honest path is the easy one.

Before you dial: the research brief

The **Research** tab is four blocks, and the difference between them is what you are allowed to say out loud.

BLOCK	WHAT IT HOLDS	HOW TO USE IT
What we observed	<i>"Facts. Each one was seen, or deliberately looked for and not seen."</i> Name, where, phone, website, rating, what their site does, software they run.	Say it as a fact.
What we infer	<i>"Conclusions the evidence supports and does not prove. Never say one as a fact."</i> Each is printed as We think: solo operator (Company scale) with a confidence such as 70% confident .	<i>"Not verified — say it as an impression, not as a fact."</i>
What to pitch	<i>"Arguments built from the two above. Each carries the reason it fired."</i> Each shows <i>"Because: the site has no way to request a quote"</i> .	Lead with these. If none: <i>"Nothing is recommended for this lead. A pitch needs an observation to cite, and there is none — open with a question instead."</i>
What we do not know	<i>"Said out loud here so it is not guessed at on the call."</i>	Ask, do not fill the gap.

An inference with a number in it is withheld rather than read out — the record says "small team", never "twelve employees" — and a recommendation with no evidence behind it is shown as broken rather than said. That is the product refusing to put a guess in your mouth.

The script

Script shows **Your script for this call**, with the line *"Generated from what the crawler saw on the crawl date."* It is written for this business, from what the crawler read on their own site, in six parts:

1. **Open with** — one line. Who you are, why you are ringing, said plainly.
2. **What we saw** — one to six things observed on their site. Every one has a citation under **From their own site**.
3. **Why them, now** — the reason this business, this month.
4. **Three questions to ask** — exactly three. Ask them; listen.
5. **If they say...** — two to five they-say / you-say pairs.

6. **The ask** — always the fifteen-minute demo, always “mornings or afternoons?”. Never a day, never a clock time: you read the time off your calendar, not off the script.

On the right, **Key talking points** — each with **Online booking · cites 2 observations** — then **Do not say** and the **Goal**.

Why there are no numbers in the script

The script contains no digits anywhere: no prices, no counts, no years. A script with a digit in it is rejected before you ever see it. Prices live on the pricing page and in the Playbook's battlecards, quoted there at the regular price — you never invent a discount on a call.

A lead typed in by hand has no script: **No script for this one** — “Open with a question rather than a claim — the objections below still apply, they are the same on every call.”

Under the script sit the built-in stage-by-stage script and the objection library, the same on every call:

Open · **Why them** · **Ask** · **How it works today** · **What it costs them** · **What we do** · **If they push back** · **Next step** · **Wrap up**. During a call, type what they just said into **What did they just say?** and the matching objection opens.

The calling window and the caps

There is no single rule. Every lead is judged against its own province's or state's law, in the lead's own time zone — never yours. The Dialer prints the window that applies and whose rule it is.

WHERE	WINDOW (THEIR LOCAL TIME)	NOTE
Canada	09:00–21:30 weekdays · 10:00–18:00 weekends	The national rule. FieldQuo is registered with the National DNCL.
Oklahoma, Florida, Maryland	08:00–20:00 every day	Plus a cap: three calls to the same business on the same subject in 24 hours — “ <i>Nothing more today. The cap is per called party, not per rep.</i> ”
Illinois, New York, the Carolinas	08:00–21:00 every day	
Utah, Alabama, Mississippi, Pennsylvania, Rhode Island	Varies; no calls on Sunday	The Dialer prints the exact hours. Holiday bans in Utah, Alabama and Rhode Island are shown as a warning you keep yourself.
Arizona	No unsolicited sales calls to mobiles	Refused outright, not a window that opens later.
A state with no window of its own	08:00–20:00 every day	FieldQuo's courtesy rule: “ <i>These hours are FieldQuo's own rule — Nevada imposes none.</i> ”

Where nobody has yet read a state's law, the console does not guess: “*Nobody has read Wyoming's telephone solicitation law.*” and no dial control is offered. Where the record has no province, “*We do not*”

know which state or province this business is in.” — put it on the lead and the button appears. The refusal from the server, if you get past all that, is the same every time: “This call is not allowed right now.” Nothing is queued to dial later; you press call when the window opens.

Making the call

DO THIS

1. With the lead open and the Dialer saying **You may ring this one now.**, press the call button.
2. Say the number they can see:
“They can see your number. Say it out loud — a callback number is part of identifying yourself in Canada, and it is the number that reaches us.”
3. Work the script. Type what they say into the Notes tab while you can still hear it.
4. Press **Hang up**.

YOU'LL SEE

Your status flips to **On a call**, then to **Writing it up** when the call ends, and the Disposition tab asks **What happened on that call?**

WHY IT MATTERS

“You rang the number. Nothing else can tell us how it went, and every number on your own screen is computed from these answers.”
You cannot dial the next lead until this one is written up: *“A call is up or the last one is not written up yet — finish that first.”*

The ten outcomes

Pick one under **Pick an outcome...**. Each does something different to the lead; the hint under each label says what.

OUTCOME	WHAT IT MEANS	WHAT IT DOES
No answer	<i>“It rang out. Nobody picked up and no machine answered.”</i>	You keep the claim; the 48-hour hold restarts.
Busy	Engaged tone, or cut off before it rang.	You keep the claim.
Voicemail — I left a message	<i>“You spoke into their machine yourself. Never a recording.”</i>	You keep the claim.
Wrong or dead number	<i>“Disconnected, or it reached somebody else entirely.”</i>	Released; the record is flagged for review.
Someone answered, but not the owner	<i>“A receptionist, a partner, an apprentice. The pitch has not happened.”</i>	You keep the claim.

OUTCOME	WHAT IT MEANS	WHAT IT DOES
They asked me to ring back	<i>"A time they agreed to. The claim is held until then and past it."</i>	Asks When did they say to ring back? — required, within 60 days. Held past that time; on your calendar and in Tasks.
Spoke to them — interested	<i>"The pitch landed. This lead is yours from here."</i>	Yours permanently; lead marked contacted. Offer the next step.
Spoke to them — not interested	<i>"They heard it and said no. Nobody else should ring them next week."</i>	Stays yours (not released), lead marked lost — so nobody rings them again next week.
Not a business we can sell to	<i>"A retailer, a franchise head office, out of business, wrong trade."</i>	Released and flagged. A note is required.
Asked not to be called again	<i>"Their words, as close as you can get them. This is permanent."</i>	A note is required. The business goes on FieldQuo's do-not-contact list — calls, texts and email — for every rep. Only a superadmin can lift it, with a written reason.

The note box reads **What did they say? (required)** for the two that need one and **Anything worth remembering** otherwise; the placeholder is the standard: **As close to their words as you can get.** Press **Save the outcome**. An outcome cannot be rewritten afterwards — a second call gets its own.

The next step, when they are interested

Under the outcome, **Next step** offers what fits the lead's state:

- Book a 30-minute demo** — onto your calendar; the invite goes to their email with a calendar file (*"Invite sent to their address, with the calendar file attached."*).
- Sent to sign up** — you texted or emailed the link and they are going to sign up. *"Marked as sent to sign up. This company is yours to chase until their setup is finished — the lead shows how far they have got."*
- "Book a 60-minute walkthrough with a specialist"** — for a company that has finished onboarding; Chapter 8.
- Schedule a call back** — a callback without the disposition, when they asked mid-conversation.

Auto-dial

The switch **Auto-dial** in the Dialer: *"After you log an outcome, the next lead rings on its own after a five-second countdown."* It is progressive, never predictive — one lead, only after your write-up, through the same gates as the call button, only while you are **Available**, never over a call.

DO THIS

1. Switch **Auto-dial** to **On**.
2. Log each outcome; use **Skip** to move past a row and **Pause** to stop the clock.

YOU'LL SEE

Calling the next lead in 5s, then **Dialling the next lead...**. When nothing is open: **Next 6 open at 11:00 (PT)** — “Every lead that can be called now has been dialled. It starts on its own when this window opens — if you are still Available and the switch is still on. Pause stops it.”

WHY IT MATTERS

It stops, and says why, when a call is up (“A call is up. Autodial carries on after you log its outcome.”), when somebody rings you (“Somebody is ringing you — the countdown was cancelled.”), when you change status (“Autodial is paused while you are Paused. Press Available to carry on.”) and when the batch is done (“Every lead in today's batch has been dialled. Claim the next batch to keep going.”).

STOP and do-not-contact

A business that asks us to stop — on the phone, by texting STOP, by replying to an email, or through a form — goes on one list that covers every channel and every rep. The console removes the dial control entirely:

They asked us to stop. “An opt-out covers calls, texts and email, so no dial control is offered here. Only a superadmin can lift it, and it needs a written reason — so if this looks wrong, say so rather than finding another number for them.” Do not look for another number for them. That is the sentence the Dialer prints and it is the rule.

Try it in your demo account

1. Open a claimed lead. Read the Research tab and write down, in your own words, one fact, one inference and one thing we do not know.
2. Read the Script tab out loud once, timing yourself. Notice there is no number anywhere in it.
3. Look at the Dialer's rules line and say whose rule the window is — the province's, the state's, or FieldQuo's.
4. Do not dial today unless your trainer says so. Your first real call is with a trainer listening.

[Back to contents](#)

Incoming calls

Your calls go out from your own number, so a contractor who rings back rings you. The drawer, what Decline really does, handing a caller to a colleague, and your voicemail.

The drawer

Anywhere in the portal, an incoming call slides a drawer down from under the top bar: **Incoming call**, the business, the number, **Rang your number your number**, and who holds them — **Claimed by you**, **Held by another rep** or **Not claimed by anyone**. Two buttons: **Pick up** and **Decline**.

Has a form, no booking

Chosen because: a quote form and no booking page (rating: 4.7)

Your script for this call

Generated from what the crawler saw on Sep 9, 2026.

- Open with**
Hi — is that South County Electric? My name's Daniel and I'm from FieldQuo. I'm calling because I've been through your website and noticed a couple of things that could help you book more jobs — do you have a few minutes so I can show you how?
- What we saw**
 - Your site takes quote requests through a form, but a homeowner can't pick a time — every job waits on a call back.
 - A strong Google rating from dozens of reviews — people already trust you; they just can't book you.
 - Invoices are paid by cheque or at the door, per your FAQ.
- Why them, now**
Norman is heading into storm season and the shops that let people book a time online are the ones that fill the schedule first.
- Three questions to ask**
 - How do quotes get back to a homeowner today — is that you, after hours?
 - When somebody wants to pay, what happens?
 - How many calls a week do you miss because you're on a ladder?
- The ask**
I can show you in fifteen minutes how it works for a business like yours. What works better for you, mornings or afternoons?

IF THEY SAY...

"We're busy enough."
Then the question is which jobs you take — booking online lets you keep the good ones.

"Send me an email."
Happy to — what should it say you care about most, the booking or the payments? Then

Calls today **24 / 250**

Every call moves a contractor closer to getting paid.

Figure 18 — The incoming-call drawer under the top bar: business, number, Claimed by you, Pick up, Decline.

DO THIS

- Press **Pick up**.
- Or press **Decline** if you genuinely cannot take it.

YOU'LL SEE

Picked up: the drawer goes and the call's controls appear in the Dialer's live slot, exactly like an outbound call. Your status becomes **On a call**. Under Decline: *"Declining passes them to the next person on the ring plan, not to voicemail."*

WHY IT MATTERS

Decline is not "send to voicemail". The ring plan tries the number's owner first (you, whatever your status), then whoever rang this caller last, then up to three available reps twenty seconds each, then a real phone somebody carries. Only after all of that does it take a message. Never a silent hang-up.

The screenshot displays the FieldQuo Sales Portal interface. On the left is a dark blue sidebar with navigation icons and labels: Today, Queue, Playbook, My leads, Conversations, Texts (3), Team (1), Notes, Calendar, My companies, Demo, Support, Voicemail (2), and Pay. The top of the main area features a search bar and status indicators: 'Available · 12m 00s' and 'Daniel Roy'. The central 'Dialer' window shows a numeric keypad, a timer at 0:02, and a red 'Hang up' button. Below the keypad, it says 'ON A CALL Bright Current Electrical · (918) 555-0123'. To the right, the 'Script' window displays a call script for 'Bright Current Electrical' with sections for 'Open with', 'What we saw', 'Why them, now', 'Three questions to ask', and 'The ask'. The script content includes details about the company's booking process and a list of questions to ask the caller.

Figure 19 — Picked up: the drawer gone, the inbound call's controls in the Dialer's live-call slot.

A Quebec caller — a 514, 438, 450 or any other Quebec area code — rings only reps who sell in French. If nobody is free at all, the caller is held and looked at again on a timer, hears “Everyone here is on another call right now... Stay on the line and I will keep trying”, and is only offered the tone after four rounds. It never claims a queue position, because FieldQuo does not know one.

Transfer to a colleague

On a live call, **Transfer this call** opens **Hand this caller to...** with the reps who are free. Each name has two buttons:

- **Speak first** — a warm transfer. You and the colleague speak privately while the caller waits on hold; when you are ready, **Put them through**.
- **Straight through** — a cold transfer. The caller is handed over the instant the colleague picks up.

“Either way the caller goes on hold while it rings, and comes back to you if nobody picks up.” It rings the colleague for twenty-five seconds. If nobody is free the list says so and why: *“Nobody else is free right now. Presence goes stale after a quarter of an hour, so a rep who has closed their laptop is not on this list even if they never signed out.”*

Voicemail

Voicemail in the sidebar: *“Messages left on your number when you could not pick up.”* It shows **Your number: your number.** and each message with **Play the message** and **Open the record**. A message with no words is shown, not hidden: *“They rang back, heard the beep and hung up without speaking. Worth a call.”*

Screenshot to follow

The Voicemail page: messages left on your number, each playable, each with Open the record. — this capture is taken from the live portal and will appear here in the next build.

Figure 20 — The Voicemail page: messages left on your number, each playable, each with Open the record.

Recording is off

Conversations are never recorded. Recording a two-party call is consent law, and there is no switch in the product that turns it on. A voicemail — one person speaking to a machine after an announcement — is the only audio FieldQuo keeps, and only so you can play it back.

Try it in your demo account

1. Ask your trainer to ring your FieldQuo number from their desk. Watch the drawer arrive; press **Pick up**.
2. On that call, open **Transfer this call** and read the two buttons beside each name. Press **Never mind**.
3. Have them ring again and leave you a message. Find it under **Voicemail** and play it.

[Back to contents](#)

Texts

Every text conversation, from one shared FieldQuo number. Four groups, a texting window in the lead's zone, STOP that really stops, and canned responses under the ! key.

The screen

Texts opens three panes: the conversation list on the left, the thread in the middle, the contact bar on the right (**Details** · **Channels** · **History**). The list's own explanation: *“Everyone you have texted, and everyone who has written back. A conversation is with a person, so it is grouped by their number — one business may sit behind two leads and the reply belongs to the same thread either way.”*

Figure 21 — The three panes: the four groups on the left, a thread with a draft check-in in it, the composer with the draft hint and the CASL footer, the contact bar on Details.

The four groups

GROUP	WHAT IS IN IT
Needs a reply	They wrote last. The only place in the portal where somebody is already waiting on you — start here.
Waiting on them	You wrote last.

GROUP	WHAT IS IN IT
Drafts due	A check-in draft is waiting for you to read and send (Chapter 8). The row says Draft check-in due Tue 10:00 .
Done	Closed by you with Mark done ; Reopen brings one back. Collapsed by default.

The texting window

Texts may go between 08:00 and 21:00 every day, in the lead's own time zone — a different window from calls, and the same seven days a week. The thread header shows **Open until 9:00 PM** or **Closed — opens 8:00 AM**; a closed window puts a system row in the thread, *“Their texting window is closed — it opens at 8:00 AM.”*, and the send is refused at the moment you press it, not when the screen loaded.

The zone is the one they stated (you typed it on the lead after asking) or the one their province implies. A province that spans zones — British Columbia, Florida, Texas — settles nothing: *“Their address does not settle the time zone — pick the one they are in.”* And it is never guessed from the area code: *“Nothing is inferred from the area code — it is wrong for every ported number, and a guessed state would be a guessed statute.”* If the zone is unknown the header says **Time zone unknown** and nothing goes out until you record it.

Writing a reply

DO THIS

1. Type in **Your reply**.
2. Press **Send it**.

YOU'LL SEE

Your message in the thread, with day dividers and your name once per group. Under the box, always: *“FieldQuo’s address and “Reply STOP to opt out” are added to the end. That is the law, not a setting — every commercial text carries them. Texts go from FieldQuo’s one shared sales number, not from your own line.”*

WHY IT MATTERS

The address and the opt-out line are the law (CASL), added to every commercial text, not only the first. Texts leave from FieldQuo's one shared sales number so that “stop selling me software” can never be confused with a homeowner's opt-out from a contractor.

STOP

A lead who replies STOP (or UNSUBSCRIBE, CANCEL, END, QUIT) goes on FieldQuo's do-not-contact list for every channel, at once. The thread shows a red STOP tag, the system row *“They replied STOP. Nothing more can be sent to this number.”*, and no composer. In its place: **This conversation is closed.** *“Nothing can be sent to this number on any channel — not a reply, not a check-in, not a follow-up. FieldQuo removes somebody from that list only on a superadmin’s written request, because the row is the evidence behind a three-year obligation.”*

Figure 22 — A STOP conversation: the red tag, the system row, no composer, the reason printed.

Canned responses: the ! key

DO THIS

1. In the composer type **!** followed by a few letters — **!chk, !sign** — as the placeholder says: *“Write a message... (type ! for canned responses)”*
2. Choose with the arrows; Tab inserts (**↑↓ choose · Tab inserts · Esc closes**). Edit, then send.

YOU'LL SEE

A popup titled **Canned responses** filtered to what you typed, in two groups: **Sales** (the **Signup link** wording) and **Check-in** (eight check-in wordings, one per situation — **Their subscription payment is failing**, **They never finished onboarding**, **Nothing looks wrong** ...).

WHY IT MATTERS

Inserting sends nothing. There are no fixed codes to memorise — the filter matches the title, then the group, then the text — so ! plus any word you remember finds it.

Figure 23 — “!chk” in the composer: the canned-response popup filtered to the check-in wordings.

New message, New text

New message opens a picker: **Search your leads** — **Only the leads you hold.** Under it, **New text to a number**: “Canadian and US numbers only. Nothing is sent until you press Send on the introduction.”

A number outside Canada and the US is refused with the server's own sentence — “Texting is available for Canadian and US numbers only.” A number another rep holds is refused too: “This number belongs to a contractor another rep is working.” A number nobody holds becomes a new lead of yours with only the number on it.

Figure 24 — A Dominican Republic number (+1 809) refused by the server's sentence.

The first text: your signup link

The first text to a lead is different from every text after it. It carries your signup link and the identification a first contact legally needs, so its wording is fixed — *“The wording is fixed: CASL requires a commercial text to name who sent it, carry FieldQuo’s mailing address and offer a working unsubscribe, and STOP is handled for real.”* — and it is sent from the lead (*“First text: the introduction with your signup link”*) or from an empty thread. The reply box only appears after that first message exists.

Figure 25 — A Montreal number accepted: an empty thread with the first-contact (signup-link) panel as its composer.

On a phone

One pane at a time: the list, then the thread with a back arrow, then the contact sheet. The composer and the ! popup work the same.

Figure 26 — A thread on a phone.

Try it in your demo account

1. Open **Texts**, press **New message** and search for a lead you hold. Open the thread but send nothing.
2. In the composer type !chk and read all eight check-in wordings. Press Esc.
3. Type +1 809 555 0100 into **New text to a number** and read the refusal.

[Back to contents](#)

After a company signs up on your link — the automated follow-ups

The moment a company signs up through your link it is yours. Here is what the product then does on its own, what it drafts for you, and what only you can press. With a real example: Daniel and Easy Roofers Inc.

Your signup link

On **Today**, under **Your signup link**: “A company that signs up through this is attributed to you at signup. Nothing else claims a company — there is no form anywhere that lets a rep assert one.” Your code is fixed for life — “Your code is danielboves. It is fixed — a changed code would quietly stop crediting the links already printed on a card.” — and the link looks like **fieldquo.com/signup?sales=danielboves**. Press **Copy the link**.

Figure 27 — What the contractor sees on your link: the normal signup form. The rep code rides along silently — nothing on the page names you, on purpose.

Attribution locks at signup and nothing in the product moves it afterwards — not you, not another rep whose link the company clicks later (that is recorded as a touch, and the credit stays where it was). So text the link, email the link, read it out; the company that signs up on it is credited to you. One exception, on **My**

leads: a company you spoke to that signed up without any link can be linked by the email they registered with, if your lead existed before they signed up and nobody else has a claim (Chapter 10).

The three pay stages

You are paid per company at three milestones, recorded by FieldQuo's own systems when each one actually happens. The plan is in Canadian dollars.

STAGE	LABEL ON THE PAY TAB	AMOUNT	FIRES WHEN
1	Activated	CA\$ 20	Stripe switches the company's charges on — they can take a card payment. That is Stripe having verified an ID and a bank account, which is why it is safe to pay this early.
2	Renewed	CA\$ 40	The company reaches its next billing cycle, after the free month. Paid or covered by a referral credit — either counts, as long as the cycle billed for something.
3	Still paying	CA\$ 65	Sixty days from signup, if the subscription is still active. A nightly sweep re-checks; a company still on trial or past due is held, not denied.

The worked example: Daniel and Easy Roofers Inc.

Daniel's link is fieldquo.com/signup?sales=danielboves. **Easy Roofers Inc.** signed up through it on **10 September 2026 at 17:06 UTC**. From that second the company is in Daniel's book: it appears on his **My companies** page with **Signed up** 10 Sep 2026 and **Subscription Trial**.

Stage 1 — Activated, CA\$20 — earned **10 September 2026 at 19:19 UTC**, two hours later, the moment Stripe switched their charges on. Daniel's Pay tab showed it the same day under **This week so far** (as \$20.00 — the tab prints plain dollars; the plan is in Canadian dollars), and Easy Roofers moved to **1 of 3** on the **Your companies** panel. That week closed on Monday 14 September and the CA\$20 went out with that week's payout run.

Stage 2 — Renewed, CA\$40 — falls on their next billing cycle. Their free month ends on **10 October 2026**; the day that cycle bills, paid by card or covered by a referral credit, the CA\$40 is recorded.

Stage 3 — Still paying, CA\$65 — sixty days from signup is **9 November 2026**. If Easy Roofers is still subscribed that night, the sweep records the CA\$65. Total for one kept company: CA\$125.

And the follow-ups: Easy Roofers' day-1 check-in draft was written on 12 September 2026 at 17:06 UTC, reason **They never finished onboarding**, and sits under Daniel's **Drafts due** as the company's own thread (Figure below). The day-7 draft falls due on 17 September; the milestone draft in the fortnight before 9 November.

What can go the other way: a cancellation, a card that is past due, a refund or a lost chargeback stops stage 3 from being earned — the nightly sweep simply finds the company not still paying. An open dispute

is held, not denied, and shows **under review** until it is settled. Where FieldQuo records a reversal of an earlier stage, the Pay tab marks it **taken back** and **Earned all time** is shown **After anything taken back**. Chapter 10 covers the Pay tab itself and the weekly run.

What the product does on its own

Three things, none of which sends anything to the customer.

1. **It attributes.** The company row carries your rep code from the signup itself. You cannot change it and neither can another rep.
2. **It watches.** Every night it reads the company's real state — is the subscription paying, is the trial ending, is Stripe connected, did they finish onboarding, which setup steps are still open — and records milestones as they happen.
3. **It drafts check-ins for you.** At day 1, day 7 and near day 60 it writes a short text from that real state and puts it in front of you as a draft. Nothing sends itself.

The check-in drafts

A check-in is a text from you to the owner, about their company, at the moment it is useful. The product writes the first draft because it can see what you cannot: their dashboard.

WHEN	WHAT THE DRAFT ASKS
Day 1	Any questions? Did you finish onboarding? — plus whatever the state shows: They never finished onboarding , “Set-up steps are still open on their dashboard”, or Nothing looks wrong .
Day 7	How is it going — with the same signals, and They cannot take a payment yet if Stripe still is not on.
Near day 60	The retention milestone is close — and, if it applies, “Their free period ends before the retention date” or Their subscription payment is failing .

Every draft opens the same way — “Hi, it is Daniel from FieldQuo, about Easy Roofers.” — then one observation from the real state (“Your subscription payment did not go through, so I wanted to flag it before it lapses.” / “I noticed there are still 3 setup steps open on your dashboard.”), one offer (“Happy to walk you through the rest if it helps.”), and a question: “How is it going so far – is everything working the way you expected?” If the product cannot see the company's state it says so rather than guessing: **We cannot see how they are doing**

Nothing sends itself

The AI only rephrases a draft built from the company's real signals. It never invents a fact, a figure or a promise; a draft it cannot ground stays in the **plain wording** the product wrote.

You read it, you edit it, you press send. “This is a reminder to yourself, not a timer. FieldQuo never texts a contractor without you pressing send — the time only decides when this draft is put in front of you, and it has to fall inside their texting hours.”

Where the drafts appear

The drafts are written down for you on their own — every morning at 07:00 UTC, and again whenever you open **Texts** or **My companies** — one row per company per touchpoint: day 1, day 7, then the fortnight before the 60-day milestone. A company that signed up on your link and has never been texted still gets one: the product walks from the attribution to the company to a number it holds (the company's, an owner's, or your lead's — never a guess) and opens the thread itself.

- **Texts** → **Drafts due** — the company's own thread, by name, with **Draft check-in due Thu 09:00** (or **Draft check-in waiting** when no time is set). Open it: the draft sits in the thread marked **Draft** · **Not sent** · **plain wording**, with **Edit** · **When** · **Put away** · **Send it now** under it, and the composer hint reads “*Draft check-in due Thu 09:00 · Tab to load it*” For a company never texted before, the composer's place says “*This company signed up through your link. Their first text is the check-in drafted above — send it from the draft.*”
- **My companies** — a **Check-in** column on every row: **Day-1 check-in due Thu 09:00 · draft ready**, **Sent 12 Sep**, **Day-7 check-in upcoming 17 Sep**, or “*No number on file — add one to the lead to text them*” — and, the day they sign up, **Signed up today — day-1 check-in tomorrow**
- **The console's Tasks tab** — under **Check-in drafts due** with **Due Thu 09:00** and a button **Open in Texts**.
- **Your demo company** carries a demo draft so you can see the shape — tagged **Demo**, with the note “*This is your demo company. The draft above shows what a day-1 check-in looks like; nothing is ever sent from a demo.*” It cannot send.

Figure 28 — Easy Roofers Inc. under Drafts due: its day-1 draft (“They never finished onboarding”) open in an otherwise empty thread with Edit · When · Put away · Send it now, the note that the company signed up through the rep’s link, and the demo company beside it marked Demo. Rendered against fixture data, so the rep named in the draft is the fixture’s, not Daniel.

DO THIS

1. Open the thread from **Drafts due** and read the draft. It is in **plain wording** — the product’s own sentences, built from the company’s state.
2. Press **Edit** to change the words and **Save the wording**; or press Tab in the empty composer to load the draft into it and type.
3. Press **Send it now** — or **When** to move the reminder, or **Put away** if it is not needed.

YOU’LL SEE

The text in the thread with the CASL footer, and a system row **Check-in sent**. Put away, it shows **Check-in put away** in History. On My companies the row flips to **Sent today**.

WHY IT MATTERS

The draft’s time has to fall inside the company’s texting hours (**Send it when?** refuses one that does not), and it is a reminder to you, not a timer. When the product offers a **Suggested check-in** inside an existing conversation, **Draft this** asks the AI to rephrase it — the one moment the AI runs — or **Not today** declines it.

You can also park a follow-up of your own for any lead — **Park a follow-up for later** — with the same rule: *“It waits as a draft. FieldQuo does not send it — you do, when you are ready. The time has to fall inside this contractor’s texting hours, or there would be nothing to press send on when it arrives.”*

The demo and the walkthrough

Two offers, from the call panel's **Next step** on the lead:

- **Book a 30-minute demo** — before they sign up, or right after. Your calendar, your demo account set to their trade.
- **“Book a 60-minute walkthrough with a specialist”** — once their setup is complete. Until then the panel shows **4 of 7 setup steps done** and *“Still open: pricing, Stripe payments, team invites”*, and says *“The specialist walkthrough is offered once their setup is complete — 4 of 7 steps done.”* When it is complete: *“Setup is complete — a one-hour walkthrough with a specialist can be booked from the call panel.”* You pick a slot a specialist is free for the full hour; the invite goes to the contact's email on the lead, and *“Walkthrough booked with the specialist. It is on your calendar and on theirs.”*

The seven setup steps the panel tracks are theirs to finish, not yours: **logo and brand colour**, **address and phone**, **services**, **pricing**, **Stripe payments**, **team invites**, **tax registration number**. A day-1 or day-7 check-in that names the open ones is the nudge.

When something is broken: the support ticket

A question you can answer, you answer. A thing that is broken — invoices not arriving, a payment that will not go through — you hand to the people who fix things, and you tell the customer what happened rather than “I sent it somewhere”.

DO THIS

1. From the lead: **Raise a support ticket for them**.
From a text thread: **Hand this to tech support**. From the sidebar: **Support**.
2. Fill **One line**, **What happened** and **How urgent** (**Low** · **Normal** · **High** · **Urgent**).
3. Press **Raise it**.

YOU'LL SEE

Raised with FieldQuo support. The ticket, its status (**Open** → **In progress** → **Resolved**), the thread and a reply box, all on the Support page.

WHY IT MATTERS

“A technical problem with the company. Support sees the ticket, not this conversation — so say what happened.” “Goes to FieldQuo, not to them. Use it when something is broken rather than when they have a question you can answer.” The company picker only offers companies in your own book.

For something faster than a ticket, #support in **Team** is where the person who can fix it already is (Chapter 9).

Screenshot to follow

My companies: name, signed up, subscription, whether they are taking payments, which milestones have been recorded, and the Check-in column. — this capture is taken from the live portal and will appear here in the next build.

Figure 29 — My companies: name, signed up, subscription, whether they are taking payments, which milestones have been recorded, and the Check-in column.

Try it in your demo account

1. Open **Today** and copy your signup link. Paste it into a note so you can read your code.
2. Open **My companies**. If it says **No companies are credited to you yet.**, that is a true answer, not an error.
3. Open **Texts**, type !chk, and read the eight check-in wordings once more — those are the drafts you will be sent.
4. Open **Support** and read the form. Raise nothing.

[Back to contents](#)

Team chat

Everyone at FieldQuo in one place — the other reps and the people who fix things. Three team channels you are always in, groups you can make, direct messages, and @mentions.

Team opens **Team chat**: “Everyone at FieldQuo — the reps on the phones and the people who fix things. Channels are for the team; a direct message is between the two of you.”

Figure 30 — #sales: the room list on the left (Teams · Channels · Direct messages · Channels you can join), the thread, the Members bar.

The three team channels

CHANNEL	TOPIC	WHO
#fieldquo	“Everybody at FieldQuo. Nobody can leave this one.”	Every rep and every admin, always.
#sales	“The reps on the phones, and the people who back them up.”	Every rep and every admin. You can leave; you are put back on your next visit.

CHANNEL	TOPIC	WHO
#support	<i>“Where a rep hands a customer problem to somebody who can fix it.”</i>	Every rep and every admin. Faster than a ticket for a problem at one of your companies; raise the ticket too when it needs tracking.

The list

Rooms are grouped **Unread** · **Teams** · **Channels** · **Direct messages** · **Channels you can join**. A public group you are not in sits under the last one with a **Join** button. The sidebar badge on **Team** counts unread messages in your rooms.

Members

The button **12 people** in the header opens the Members bar: each person with **Sales rep**, **FieldQuo staff** or **Superadmin**, and their floor state — **Available**, **On a call**, **Writing up a call**, **Paused**, **Off** — so you can see who is free before you ask.

New message, New group

DO THIS

1. Press **New** → **New message**, **Search people by name or email**, pick one.
2. Or **New group**: **Name** (**It will be #sales-west**), **Topic**, tick **Private group** if only the people you add should see it, choose **Members**, press **Create group**.

YOU'LL SEE

A direct message opens with *“Just the two of you. Nobody else can read this.”* A group shows **You created the group**, and *“Only the people you add can see it exists. Anyone at FieldQuo can find and join a public group.”*

WHY IT MATTERS

That name belongs to a team channel. — the three team names are taken, and a team channel keeps its name. Only the person who made a group can rename it or remove people.

Figure 31 — A group: name, topic, the members, who created it.

@mentions

Type @ and a popup titled **Mention someone** lists the people in the room (↑↓ · **Tab or Enter**). A mention is by display name, so **@Daniel** works; **@support** reaches the support mailbox's owner. The Team badge counts mentions of you separately.

Figure 32 — The @ popup listing the people in the room.

Composer rules are the same as Texts: **Enter to send · Shift+Enter for a new line**, and ! opens canned responses.

Try it in your demo account

1. Open #sales and say hello — one line, with your name and the trade you are starting on.
2. Open the Members bar and find your trainer. Start a direct message with them.
3. Type @ and pick your trainer's name. Send it.

[Back to contents](#)

The rest of the portal

Today, My leads, Conversations, Calendar, Notes, Playbook, Support, and Pay — what each is for, in the order you will reach for them.

Today

Today is titled **Your day**: *“Everything below is yours alone. Nothing here is another rep’s book.”* One sentence at the top says what to do next, from a fixed ladder: a reply waiting (*“A reply is the only thing on this screen where somebody is already waiting on you.”*), then claimed leads not rung (*“A claim stops every other rep phoning them. Working it is what makes holding it fair.”*), then leads free to claim (*“Pick one trade and stay on it — the script gets better by repetition.”*), then leads you typed in and never contacted. When nothing is waiting it says so: **Nothing is waiting on you** — *“No replies, no unworked claims, nothing free in the pool and no untouched leads. That is a real answer, not an empty screen.”*

Under it: your signup link (Chapter 8) and **Signups you brought in** — **today (UTC)**, **this week (UTC, from Monday)**, **all time**. *“Counted in UTC so every rep and the office agree on what “today” means — your local evening may already be tomorrow here.”*

Screenshot to follow

Today: the next-step sentence, the counts, your signup link. — this capture is taken from the live portal and will appear here in the next build.

Figure 33 — Today: the next-step sentence, the counts, your signup link.

My leads

My leads: *“Leads you’re working. Email them from here and the whole conversation is kept against the lead — as well as in your own mailbox.”* Two kinds of lead live here — ones you typed in with **Add lead** (**Business name**, **Contact name**, **Email**, **Phone**) and ones you carried over from the queue with **Work this one as a lead**. Filter by **New** · **Contacted** · **Demoed** · **Signed** · **Lost**.

- **Where they are.** **Say where this business is** — **Country**, **State or province**, **Their time zone**. This is what decides the calling and texting windows; *“Nothing is inferred from the area code — it is wrong for every ported number, and a guessed state would be a guessed statute.”*
- **Email.** **New email to their address** — *“Sent from your work mailbox, your work mailbox. Their reply reaches it and is filed here. FieldQuo’s name and mailing address and an unsubscribe line are added to the bottom — CASL requires both in a commercial email.”*
- **The first text.** **Text them your signup link** (Chapter 7).
- **Linking a signup.** If a company you spoke to signed up without your link: *“Type the email the client registered with. FieldQuo looks the company up by exactly that address and says whether it can be linked.”* Type it in **Email they signed up with**, press **Check**, then **Link**. The verdicts are honest —

*“That company is unclaimed. Linking attributes it to you.” / **That company is attributed to another rep.** / “That company signed up before this lead was created, so it can't be claimed from it.” / “That company came in through a referral code, so it isn't a rep's sale to claim.” — and **Unlink** works for thirty days.*

- **Raise a support ticket for them** — Chapter 8.

Screenshot to follow

My leads: the list, a lead's detail with where they are, email, the first text, and the link-a-signup box. — this capture is taken from the live portal and will appear here in the next build.

Figure 34 — My leads: the list, a lead's detail with where they are, email, the first text, and the link-a-signup box.

Conversations

Conversations: every email conversation you are having with a lead, newest first, *“Sent from your own mailbox, kept here against the lead.”* A reply is the top rung on Today because it is the only thing where somebody is already waiting on you.

Calendar

Calendar — **Your appointments and callbacks.** A month grid of what is yours: **Call back** events from your dispositions, **Demo** and **Walkthrough** bookings from the call panel, and **Appointment** events you add with **New event** (**Lead (fills the contact)**, **Date**, **Start**, **End**, **Title**, **Location**). Click an event to **Save changes**, **Done** or **Cancel event**; **Add to calendar** gives you a file for your own calendar app.

Screenshot to follow

The month grid with a callback and a demo on it. — this capture is taken from the live portal and will appear here in the next build.

Figure 35 — The month grid with a callback and a demo on it.

Notes

My notes — **New note** is the first thing under your thumb, on purpose; it is built for a phone in a car park between calls. Plain text, saved as typed, kept on your device until it reaches the server (**Not saved. Your text is kept on this device.**). **Archive** is not a delete: *“Archived. It is still here and still readable — archiving is not a delete.”*

Who reads your notes

“FieldQuo superadmins can read every note you write here.” “Other sales reps cannot — a note is scoped to whoever wrote it. There is no private mode, because a superadmin has the database and a private label they could read past would be a promise FieldQuo cannot keep.”

Screenshot to follow

Notes: the list, a note open, Archive. — this capture is taken from the live portal and will appear here in the next build.

Figure 36 — Notes: the list, a note open, Archive.

Playbook

Playbook: *“The call, the twenty objections, and what to say when a contractor names a competitor. Everything here is what the call console reads too — if you find a sentence that is wrong, it is wrong on the calls as well, so say so rather than working around it.”*

- **The call** — *“Four scripts, one spine. Which one opens is decided by what the crawl found about that business — a lead nothing has been observed about gets no script at all, on purpose. The opener is the same in all four; the question under it is not, and that question is the one the rest of the call hangs off.”*
- **Either side of the call** — *“The receptionist, the beep, the two follow-ups, the fifteen minutes and the ask. None of these is a stage of the call — they happen before it, instead of it, or after it in another channel — which is why they are here rather than in the scripts above.”*
- **Objections — all 20** — *“Each one is restate, then welcome it, then answer, then one small thing they can actually do. None of them ends the sequence — eighty-one per cent of sales happen on or after the fifth call, so a sentence a single word can end throws four of them away. The one exception is “not interested”, where the offer to stop calling is a real switch.”* Under **What did they just say?**, *“Type the words they used. It matches on what a contractor actually says, not on our names for things.”*
- **Battlecards — the five they will name** — *“Every line below is assembled from the same rows the public comparison pages render, so a contractor who reads the page and a contractor who talks to you get the same facts. What that also means: nothing here can be improved by rewording it. If a figure is wrong, it is wrong on fieldquo.com too.”* Each card: **Say this when they name them**, **What they genuinely do well**, **Where we win**, **The price** (**Ours starts at \$99 for 1 seat and 0 crew.**), **The page a contractor reads**.

Screenshot to follow

The Playbook: the call, the objections, a battlecard. — this capture is taken from the live portal and will appear here in the next build.

Figure 37 — The Playbook: the call, the objections, a battlecard.

Support

FieldQuo tech support: “Something wrong at one of your companies? Send it here. It goes straight to the FieldQuo owner account, and you can follow it below.” The form (**Which company** , **One line** , **What happened** — “What they did, what they expected, what they got. Dates and a quote or invoice number help.” — **How urgent** , **Escalate to FieldQuo**), then your tickets filtered **All** · **Open** · **In progress** · **Resolved** , each with its thread and **Send reply** . “No company is attributed to you yet, so there is nothing to raise a ticket about. A ticket can only be about a company in your own book.”

Screenshot to follow

Support: the form and the ticket list. — this capture is taken from the live portal and will appear here in the next build.

Figure 38 — Support: the form and the ticket list.

Pay

Your pay: “What you have earned, which of your companies is at which stage, and where FieldQuo sends it. The figures are read from the commission ledger — the same one the payout run pays from — and nothing here can be edited from this screen.” Four panels, top to bottom.

Your earnings

Your earnings — “Recorded by FieldQuo when each milestone actually happens. Nothing on this screen can be edited from here — it is the same ledger the payout run reads.” Four figures: **Earned all time** (**After anything taken back**), **Paid to you** (**Weeks marked paid**), **Closed, not paid yet** (**Waiting on the payout run**), **This week so far** (**Closes Monday**). Before your first company activates it says “Nothing recorded yet. Your first commission lands when a company you signed up can take payments — you will see it here the same day.”

Under **Your companies** , each customer with its three rungs — **Activated** · **Renewed** · **Still paying** — shown as **1 of 3** , with **not yet** , **under review** or **taken back** where it applies. Under **By week** , each week: **This week, still open** , then “Closed. Waiting on the payout run — no transfer has been made yet.”, then **Paid 15 Sep** .

The weekly run

Weeks run Monday to Monday in UTC. A milestone recorded during the week lands in **This week so far** . Every Monday the previous week closes into one batch per rep and moves to **Closed, not paid yet** ; FieldQuo then sends that batch to the destination on file and marks the week **Paid ...** . No transfer is made by a machine — a person pays the batch, which is why the destination has to be right.

If money is recorded and no destination is set, the page says so at the top: “You have money recorded and no payout destination set, so there is nowhere to send it. Fill in the form below and it will go out with the next run.”

Payout destination

How would you like to be paid? — **Interac e-Transfer** (“Canadian accounts only. Usually free and same-day.”), **PayPal**, **Wise** (“Best for a rep outside Canada. Converts at the mid-market rate with the fee shown up front, so what arrives is predictable — and it can land in your own currency.”), **Bank transfer**, or **Upwork** (“Released against the contract's milestones. Upwork's own fee applies and comes off what lands, so the figure in the ledger is what FieldQuo sends, not what arrives.”). Press **Save**; later, **Confirm these details** — the page shows **Confirmed 40 days ago.** and nudges you when it is stale: “That was a while ago — worth re-confirming it is still right.”

Your engagement

Your engagement — **Freelancer** or **Employee**. “This one is set by FieldQuo, not here — it decides paid leave and what is withheld, so it is not something to pick for yourself. If it looks wrong, say so and it will be corrected.”

Languages

The two language controls from Chapter 1.

Screenshot to follow

The Pay tab: earnings, each company and its stage, the weeks, the payout destination. — this capture is taken from the live portal and will appear here in the next build.

Figure 39 — The Pay tab: earnings, each company and its stage, the weeks, the payout destination.

Try it in your demo account

1. Add one lead by hand in **My leads** — a fictional business with your own mobile number. Set where they are. Read what the lead now offers you.
2. Book a **Call back** on it for tomorrow from **New event**. Find it on the Calendar; mark it **Done**.
3. Write one note in **Notes**. Archive it. Find it under **Archived (1)**.
4. Open **Pay** and confirm your payout details.

[Back to contents](#)

Rules you must follow

Short, plain, and each one is enforced by the product where the product can. Where it cannot, it is on you.

1. **Calling windows and caps are enforced.** Ring inside the lead's window, in their zone. The Dialer decides; where it says **You may not ring this one right now.** you wait, and where it offers no button there is nothing to press. The 3-per-24-hours cap in Oklahoma, Florida and Maryland counts every rep's calls, not yours alone — and where the count is not available the Dialer tells you to keep it yourself.
2. **Every commercial text carries FieldQuo's mailing address and “Reply STOP to opt out”.** Added automatically; do not try to shorten a message by removing them — you cannot.
3. **STOP means every channel, for everyone.** A do-not-contact holds for three years. Do not look for another number, another email, another rep. Only a superadmin can lift it, with a written reason.
4. **Never text a number you do not hold.** The portal refuses a number on another rep's lead — “This number belongs to a contractor another rep is working.” — and a first text goes only from the lead, with the fixed introduction.
5. **Quebec is French.** A Quebec lead reaches you only if you ticked French under **Languages I can sell in**. If one is on your screen, take the call in French.
6. **Call recording is off, and there is no switch.** Consent law. Never record a call on your own device either.
7. **Say your callback number.** *“They can see your number. Say it out loud — a callback number is part of identifying yourself in Canada, and it is the number that reaches us.”*
8. **No price below the regular price on a script or a call.** The pricing page and the battlecards are the only prices you quote, at the price on them. The script has no digits in it for that reason; the Playbook's own line is “I am not going to discount it.”
9. **Say inferences as impressions and unknowns as unknowns.** *“70% confident. Derived from what we observed. This is not a fact — do not say it as one.”*
10. **A claim is a promise to call.** A claim stops every other rep phoning that business. Work it or release it — *“Gives back every lead you have not dialled. Ones you called stay yours. This also happens on its own at the end of your day.”*
11. **Write up every call, in their words.** The two outcomes that need a note need it because it is the only record there will be.
12. **Your notes are readable by superadmins, never by other reps.** Write nothing you would not want read.
13. **The demo is yours; a customer's account is theirs.** You never sign into a customer's company.

[Back to contents](#)

Day-one checklist, glossary, additional resources

Tick the list before your first live call. The glossary is the vocabulary the portal uses. The resources are only things that exist today.

Day-one checklist

- ☐ Invitation accepted; password of twelve characters or more; you can sign in at fieldquo.com/sales and sign out.
- ☐ Portal language set on **Pay**.
- ☐ **Languages I can sell in** ticked and saved — French if you can sell in French.
- ☐ Payout destination saved and confirmed.
- ☐ The tour taken to the end (**Take the tour**).
- ☐ Demo account claimed; password received from a superadmin; opened with **Open the demo company**; one quote built, sent, approved and paid inside it; data reset.
- ☐ Headset plugged in; the browser allowed the microphone; the Dialer shows **Ready to receive calls**.
- ☐ Status set to **Available** and back to **Off** once, so you know where it is.
- ☐ One trade chosen; one batch claimed with **Claim the next 25**; the window groups and zone chips understood.
- ☐ The Research tab's four blocks and the Script's six parts read on one lead.
- ☐ The ten dispositions read; the two that require a note known (**Not a business we can sell to**, **Asked not to be called again**).
- ☐ Texts opened; !chk tried; the CASL footer read; a +1 809 number refused.
- ☐ Hello said in #sales; a direct message sent to your trainer.
- ☐ Your signup link copied and your code read.
- ☐ Chapter 11 read twice.

Glossary

Lead

Any business you may sell to: a researched contractor in the queue, one you typed into My leads, one you are texting. The one word for all of them.

Batch

The up-to-25 leads a single press of **Claim the next 25** claims: open now, closing soonest first, researched first. Tops itself up under five open.

Claim

Holding a lead so no other rep rings it — 48 hours, restarted by each call, made permanent by a real conversation (**I spoke to them — keep this one**).

Calling window

The hours a lead may legally be rung, in the lead's own time zone, set by their province or state — or by FieldQuo's courtesy rule (08:00–20:00) where the law sets none. Distinct from the texting window (08:00–21:00 every day).

Zone chips

All · ET · CT · MT · PT (· AT · NT) above your list. Filter the list and the walk by time zone.

Cap

A state's limit on calls to the same business on the same subject in 24 hours — three, in Oklahoma, Florida and Maryland. Counted per called business, across all reps. Not the same as the 250 daily claim ceiling.

Disposition

The outcome you record when a call ends — one of ten. Each does something to the claim and the lead.

Callback

The disposition **They asked me to ring back**, with a time within 60 days. Holds the claim, lands on your calendar and in the Tasks tab.

Check-in draft

A short text the product writes for a company that signed up on your link — at day 1, day 7 and near day 60 — from the company's real state. You read, edit and send it. Nothing sends itself.

Activated / Renewed / Still paying

The three pay stages per company: CA\$20 when Stripe switches their charges on; CA\$40 when they reach their next billing cycle; CA\$65 at sixty days if still subscribed.

Attribution

The record that a company signed up on your link. Locked at signup; the only thing commission is computed from.

Payout run

The weekly batch that pays closed weeks (Monday to Monday, UTC) to the destination on your Pay tab.

Demo account

A real FieldQuo company with sample data, assigned to you alone, that you sign into and drive in front of a lead. Nothing sends from it.

Walkthrough

The one-hour session with a specialist offered to a company that has finished onboarding, booked from the call panel.

STOP / do-not-contact

One list, every channel, every rep, three years. A texted STOP, a spoken request, an email reply or a form all put a business on it. Only a superadmin lifts it, with a reason.

Research brief

The Research tab's four blocks: what we observed (facts), what we infer (with a confidence), what to pitch (with the reason), what we do not know.

Script

The call written for one business from what its site says: open with, what we saw, why them now, three questions, if they say..., the ask. No digits, no day, no clock time.

Playbook

The stage-by-stage script, the twenty objections, and the competitor battlecards. What the console reads too.

Status

Available · **Break** · **Dinner** · **Meeting** · **Training** · **Off**. Callbacks ring and auto-dial runs only while Available.

Auto-dial

The switch that rings the next open lead five seconds after you log an outcome. Progressive: one at a time, through the same gates as the call button.

Warm / cold transfer

Speak first (you brief the colleague first, caller on hold) or **Straight through** (handed over the instant they answer). The caller always comes back to you if nobody picks up.

CASL

Canada's anti-spam law. The reason every commercial text and email carries FieldQuo's mailing address and a working opt-out, and the reason a first text has a fixed wording.

Superadmin

The FieldQuo role that invites reps, sets demo passwords, lifts a do-not-contact, and can read every note. Not “admin”, not “support”.

UTC

The clock the portal counts days and weeks in, so every rep and the office agree on what “today” means.

Additional resources

Only what exists today. Where a page is still being filled, this says so.

fieldquo.com https://www.fieldquo.com	The public site — the same promise a lead reads: build a quote on site, send it before you leave the driveway, get paid without chasing anyone. Read it once as a homeowner would.
Pricing https://www.fieldquo.com/pricing	The four plans — Solo, Crew, Shop, Scale — seats and free crew members per plan, and the line “All of it is in every plan”. The only prices you quote.
Features https://www.fieldquo.com/features	Everything FieldQuo does, one page per feature. When a lead asks about something not in your script, this is where the true answer is.
Help Center https://www.fieldquo.com/resources/help	Placeholder today: guides and how-tos are being added. It points to the contact form and carries the contractor glossary. Do not send a customer here for setup help yet — send a check-in, or raise a ticket.
Contact https://www.fieldquo.com/contact	The public contact form. For a customer who wants to write to FieldQuo directly.

The sales reference guide (PDF)

FieldQuo — the sales reference, in English, French and Spanish: every feature, taken from the product's own feature matrix, with the plans and a glossary. The product reference; this manual is the portal reference.

#support in Team chat

Where the people who fix things already are. Faster than a ticket; raise the ticket too when it needs tracking.
